Critical and Surgical Disease Specialist (India)**

**INVENTOR OF
AAROGYA SUPER SPECIALITY MODERN HOMEOPATHY**

COMPLETE, EASY SAFE, FAST & COST-EFFECTIVE CURE

Dr. Arpit Chopra Jain M.D Homeopath

Critical and Surgical Disease Specialist

Dr. Arpit Chopra Jain: Transforming Global Healthcare with Aarogya super Speciality Modern Homeopathy.

Dr. Arpit Chopra Jain, a pioneer in advanced homeopathic medicine, is set to present groundbreaking clinical data comprising over 3,000 successfully treated cases of critical and surgical diseases — all cured without the need for surgery. This revolutionary treatment approach, developed and practiced exclusively by Dr. Jain, utilizes high-potency homeopathic medicines formulated by him, offering fast, safe, and side-effect-free results.

With over 21 years of experience, Dr. Jain has dedicated his life to providing an alternative yet powerful medical solution that not only preserves the body's original organs but also ensures deep, lasting cures. **His work has gained national and international recognition. He has been honored by India's Vice President, Defense Minister Shri Rajnath Singh, Health Minister Shri J. P. Nadda, and several other dignitaries.** In acknowledgment of his contributions, he has also received a prestigious honorary doctorate from the USA.

Dr. Arpit Chopra Jain proudly represents India on the international stage as the **Homeopathic Representative for BRICS (Russia)** and continues to raise the global profile of homeopathy through his one-of-a-kind center based in Indore, Madhya Pradesh, India. From this single center, he has reached and treated patients from over 19 countries, offering remote consultations and delivering life-changing results globally.

Recently, **Dr. Jain was invited as the Guest of Honor at the highly esteemed United Nations Global Excellence Awards held at the UN Headquarters in New York, hosted by the United Nations Global Peace Council.** This momentous occasion was a testimony to his relentless commitment and global vision for homeopathy.

His work is supported by real, verifiable patient testimonials, including pre- and post-treatment reports, available on his official website and YouTube channel. These authentic stories reflect the effectiveness and rapid healing power of his treatment.

This book is a humble attempt to introduce Dr. Jain's extraordinary journey and his mission — to make the world healthier without surgery, promoting natural healing through scientifically advanced homeopathic medicine. His goal is to create a safer, more cost-effective, and organ-preserving healthcare alternative for patients across the globe.

The identity of any person is his real wealth.

INTRODUCTION

Inventor of Aarogya Super Speciality Modern Homoeopathy, revolutionized treatment for complex diseases

Professor Dr. Arpit Chopra Jain

Professor Dr. **Arpit Chopra Jain**, with over 20 years of medical experience and research, has revolutionized classical homeopathy by developing a future-oriented, super-speciality modern homoeopathy treatment system. His innovative approach has given new physical, mental, and social life to thousands of patients who were once considered incurable, including those suffering from nearly 300 different diseases such as cancer, kidney failure, coma, aplastic anemia, and other serious conditions requiring surgical intervention. In doing so, he has also fulfilled the World Health Organizations (WHO) belief that true health encompasses physical, mental, and social well-being.

Originally from Chhattisgarh, Dr. Arpit Chopra Jain received his primary education in his home state before moving to Indore to pursue a Bachelors degree in Homeopathy. After completing his BHMS, he earned an MD in Homeopathy from DKMM Homoeopathic Medical College in Aurangabad, Maharashtra. During his studies and career, he worked alongside many renowned allopathic doctors in Indore and other locations, acquire practical experience and contributing to medical advancements.

Currently, Dr. Arpit Chopra Jain is providing medical services through the Aarogya Super Speciality Modern Homoeopathy Clinic, located at Janjirwala Square in Indore, where he leads a team of experienced professionals. In addition to his clinical work, Dr. Arpit Chopra Jain plays a pivotal role in shaping homeopathic education as an educator at RN Kapoor Homoeopathic Medical College. His research focuses on complex blood-related diseases, including aplastic anemia and sickle cell anemia.. Driven by a commitment to innovation, Dr. Jain has been nationally and internationally recognized for his groundbreaking contributions to the treatment of complex and incurable diseases. His exceptional service during the COVID-19 pandemic further highlights his dedication to advancing modern homeopathic medicine.

Many of Dr. Arpit Chopra Jain's patients regard him as a godsend, praising his unwavering commitment to serving humanity. Beyond his medical practice, Dr. Arpit Chopra Jain, who hails from a family of 19 physicians, is making significant contributions to society and the Nation.

He firmly believes that Aarogya Super Speciality Modern Homoeopathy - instant, effective, affordable, and without side effects is the future of homoeopathy. While homoeopathy may have originated in Germany, Dr. Arpit Chopra Jain is confident that India's revolutionary modern homoeopathic medical system will one day be recognized globally, inscribing India's name in golden letters on the world health chart. He and his team are making every possible effort to achieve this vision and will continue to do so.

Golden India's Revolutionary Discovery: Pioneering the Future of Healthcare with Advanced Homoeopathy

Homoeopathy, a system of alternative medicine established over 200 years ago by German physician Dr. Samuel Hahnemann, has experienced widespread adoption across various countries, including India. However, over time, it faced criticism and was even banned in certain regions due to persistent myths and misconceptions, such as its alleged placebo effect. Critics claimed that homoeopathic remedies were ineffective, slow to act, and not backed by scientific evidence, leading to widespread skepticism among both the public and the scientific community.

One significant issue was that classical homoeopathy relied heavily on treating patients based on symptoms alone, without extensive clinical documentation or diagnostic reports. This absence of empirical evidence made it challenging to validate its effectiveness through conventional medical research methods.

In response to these challenges, Dr. Hahnemann later developed a more potent form of homoeopathic medicine, known as the 50 millesimal potency, or 5 million power. However, by the time this advancement was introduced, classical homoeopathy had already established deep roots, and the lack of continued research, documentation, and clinical validation led to its gradual decline in some regions.

Recognizing the need to address these limitations, Professor Dr. Arpit Chopra Jain, with over 20 years of clinical and hospital experience, pioneered a groundbreaking approach known as Super Speciality Modern homoeopathy Utilizing the powerful 50 lakh potency homoeopathic medicines, along with mother tinctures, biochemic treatments, and dilutions, Dr. Jain's revolutionized the practice by effectively treating severe autoimmune conditions, including cancer, kidney failure, aplastic anemia, sickle cell anemia, rheumatoid arthritis, ankylosing spondylitis, and many other life-threatening illnesses. This innovative treatment approach has produced remarkable results, enabling patients suffering from complex and incurable diseases to recover without any side effects or lifelong medication dependency. Dr. Jain's method has proven particularly effective in cases previously deemed untreatable, such as patients in comas, those with brain tumors, or those in the terminal stages of illness.

His success extends beyond India, benefitting patients in countries such as Pakistan, Dubai, Bangladesh, the United States, and the United Kingdom.

A key differentiator of Super Speciality Modern Homoeopathy is its integration of clinical pathology alongside traditional symptom-based diagnosis. Dr. Jain's has meticulously collected pre- and post-treatment test reports from over 3,000 successfully treated patients, along with their written testimonials and interviews, both online and offline. This substantial body of evidence aims to secure recognition for his treatment methodology within the broader medical community, ensuring future generations of homoeopathic practitioners can offer hope to patients who might otherwise remain hopeless.

Dr. Jain's innovative work continues to shape the future of homoeopathy providing a new path forward for both patients and healthcare providers worldwide.

Complete Cure, Permanent, Easy, Safe, Fast, Cost Effective.

Aarogya Super Specialty Modern Homoeopathy -

It is a modern medical science which incorporates the basic nature of homoeopathy and keeps it as its basis and includes many other new features.

Easy Method -

In Aarogya Super Speciality Modern Homoeopathy, a variety of homoeopathic medicines are utilized, including decimal potency, centesimal potency, 50 millesimal potency, mother tinctures, biochemic medicines, The method of administering these medicines is straightforward and can be easily followed in the prescribed dosage under the guidance of a qualified homoeopathic doctor. One of the unique aspects of Aarogya Super Speciality Modern Homoeopathy is that it does not work with the traditional restrictions often associated with homoeopathic treatment, such as avoiding strong-smelling substances during medication. Due to the high quality and potency of the medicines used, these minor misconceptions hold no relevance in this advanced system of treatment. This approach allows for effective treatment without the need for strict dietary restrictions, making it more accessible and easier for patients to adhere to. Aarogya Super Speciality Modern Homoeopathy excels in providing top-tier treatment with minimal medication, even for complex and difficult-to-treat conditions. In this system, various diseases are treated directly and comprehensively, whether through homoeopathic medicines alone or in combination with supportive medicines from other medical systems, depending on the patients condition and the nature of the disease. This holistic approach ensures that patients receive the most effective and personalized care

Harmless Medical Method -

One of the most remarkable aspects of Aarogya Super Speciality Modern Homoeopathy is its safety profile, even when high potencies are used. Unlike conventional treatments where the risk of side effects increases with the dosage of active ingredients, homoeopathic medicines are carefully prepared through a process called potentiation. In this process, the original substance is diluted while simultaneously increasing its potency. This unique method ensures that only a minimal amount of the chemical or raw material remains in the final product. As a result, Aarogya Super Speciality Modern Homoeopathy offers highly effective treatments without the risk of harmful side effects. The approach is practically unmatched in other branches of medical science, where larger doses of active substances can often lead to adverse reactions. In this way, modern homoeopathy provides a safe and natural healing method, making it an ideal option for individuals seeking a harmless yet potent solution to their health issues.

Fast Aggressive Treatment -

One of the most remarkable aspects of Aarogya Super Speciality Modern Homoeopathy is its fast and aggressive healing process, setting it apart from conventional homoeopathy. In this advanced system, medical expertise is combined with cutting-edge technology, including computerized software, to ensure rapid, accurate diagnosis and treatment. Doctors utilize a vast array of over 4,000 potent medicines, with strengths ranging from zero potency to an astonishing 50 lakh potency, making the treatment scientifically robust and effective for a wide range of diseases. The precision of this method allows doctors to quickly gather and analyze detailed information about a patients condition, helping them select the most suitable remedy. This tailored approach ensures that even severe, surgical, or seemingly incurable conditions are addressed efficiently and effectively. What makes this treatment truly revolutionary is its ability to provide fast relief without any side effects, transforming it into a powerful, unique, and highly reliable branch of medical science.

Complete cure of diseases from the root -

Aarogya Super Speciality Modern Homoeopathy aims to heal the patient completely body, mind, and soul ensuring not only recovery from current ailments but also preventing the recurrence of diseases throughout life. This holistic approach to treatment is a crucial aspect of any effective medical science.

This fast and aggressive treatment approach embodies the future of homoeopathy, offering hope to patients facing complex diseases while maintaining the core principles of safety, simplicity, and efficacy.

Cost-Effective Treatment with Aarogya Super Speciality Modern Homoeopathy

Despite its advanced and multifaceted approach, Aarogya Super Speciality Modern Homoeopathy remains highly affordable and accessible, making it a preferred choice for many. Compared to other medical systems, it offers a cost-effective solution while providing complete, safe, and test treatment. This affordability, combined with its ability to deliver immediate results without harmful side effects, has contributed to the growing global popularity of modern homoeopathy. Today, homoeopathy is trusted by millions, with affordable medicines available to those in need. Every fourth person in the world now benefits from homoeopathy in some form, relying on its holistic and comprehensive approach to healthcare.

Dr. Arpit Chopra Jain, M.D. in Homoeopathy and the inventor of Aarogya Super Speciality Modern - Homoeopathy, has been instrumental in making this revolutionary treatment accessible to people from all walks of life. His commitment to providing effective, affordable, and harmless treatment has redefined the landscape of healthcare, offering hope and healing to thousands.

Dr. Arpit Chopra (Jain)
 M.D. HOMOEOPATHY
 Inventor of Aarogya Super Speciality Modern Homoeopathy

Aarogya Super Speciality Modern Homoeopathy

Successful Treatment of Critical Health Conditions

Dr. Jain's innovative treatment method has shown exceptional results in managing and curing serious health conditions, including:

- Cancer
- Kidney Diseases
- Coma
- Blood Disorders such as sickle cell anemia and aplastic anemia
- Arthritis
- Autoimmune Diseases
- Neurological Disorders
- Heart Diseases
- Skin Conditions like psoriasis and dermatitis

Through a deep understanding of the body's internal balance, Aarogya Super Speciality Modern Homoeopathy targets the root causes of these diseases, promoting natural self-healing without the need for invasive procedures or lifelong medications.

Revolutionizing Disease Treatment

Aarogya Super Speciality Modern Homoeopathy, developed by Dr. Arpit Chopra Jain, has introduced a groundbreaking, holistic approach to treating a wide range of complex and chronic diseases. This method offers a comprehensive, harmless, cost-effective, and permanent solution, achieving remarkable success where conventional treatments often fall short.

Efficacy Across a Wide Range of Diseases

With a proven record of success in treating nearly 300 different diseases, Aarogya Super Speciality Modern Homoeopathy offers relief from conditions that affect various aspects of health. Patients suffering from:

- Allergies
- Womens Health Issues
- Urological and Gastric Problems
- Rheumatoid Arthritis
- Pediatric Conditions
- Spinal Cord Disorders

have all experienced life-changing results through this pioneering method.

A New Lease on Life

What truly sets this treatment apart is its ability to provide lasting and permanent relief. Patients who were previously dependent on lifelong medication or faced invasive surgeries have regained their health, returning to a normal, medication-free life. Aarogya Super Speciality Modern Homoeopathy continues to transform lives, offering a new, holistic approach for those suffering from complex and chronic diseases.

Kidney

Kidneys are the cleanliness ministry of our body

THE VITAL ROLE OF KIDNEYS AND A NEW APPROACH TO KIDNEY HEALTH

The kidneys are indispensable organ that play a crucial role in maintaining our overall health. They function as natural filters, purifying the blood by removing unnecessary substances and expelling them through urine. Proper kidney function is essential for the body's balance and well-being. When the kidneys fail to operate effectively, it can lead to severe health issues that impact the entire body. Without timely and appropriate intervention, kidney-related diseases can become life-threatening.

Common Kidney Diseases

Kidney diseases can manifest in various forms, including:

Kidney Stones: Hard deposits that form in the kidneys and can cause pain and blockages.

Chronic Kidney Disease (CKD): A progressive loss of kidney function over time.

Polycystic Kidney Disease: A genetic disorder characterized by the growth of numerous cysts in the kidneys.

Nephrotic Syndrome: A condition involving significant protein loss in the urine, leading to swelling and other issues.

Conventional Treatments and Their Limitations

Traditional allopathic medicine often addresses kidney diseases through a series of interventions. Treatment usually begins with medication, but may progress to more invasive procedures such as blood transfusions, plasma treatments, dialysis, and, in severe cases, kidney transplants. While these methods can be effective, they often come with significant risks and drawbacks, including the need for ongoing treatment and the potential for serious side effects.

Dr. Arpit Chopra Jain offers an alternative through his super-speciality modern homoeopathy practice. His approach is centred on the belief that preserving and healing our natural organs is preferable to replacing them with artificial or donor organs. According to Dr. Arpit Chopra Jain, maintaining the health of our kidneys through natural, holistic methods is both beneficial and safer.

Through his innovative homoeopathic treatments, He has achieved remarkable success in curing patients with severe kidney-related conditions. His methods have enabled many individuals to regain their health and happiness without resorting to kidney transplants or invasive surgeries. By focusing on the body's natural healing processes.

Dr. Arpit Chopra Jain's approach offers a more conservative and potentially less risky path to recovery.

Modern Homoeopathy Approach

The Benefits of Modern Homoeopathy for Kidney Health

Non-Invasive: Dr. Arpit Chopra Jain's treatments do not involve surgical procedures or invasive techniques.

Holistic Healing: The approach aims to address the root causes of kidney issues and promote overall well-being.

Long-Term Health: Patients treated with Dr. Arpit Chopra Jain's methods have reported lasting improvements in their kidney function and overall health.

Avoidance of Transplants: Many patients have been able to avoid the need for kidney transplants and other extreme measures.

Ref By	: SELF	Report Status	: Final

Test Name	Results	Units	Bio. Ref. Interval
HbA1c (GLYCOSYLATED HEMOGLOBIN), BLOOD			
HbA1c	6.8	%	4.6 - 6.5
Estimated average glucose (eAG)	142.72	mg/dL	90 - 150

Interpretation
HbA1c result is suggestive of diabetic / well controlled Diabetes in a known Diabetic.
Note: Presence of Hemoglobin variants and/or conditions that affect red cell turnover must be considered, particularly when the HbA1c result does not correlate with the patient's blood glucose levels.

FACTORS THAT INTERFERE WITH HbA1c MEASUREMENT	FACTORS THAT AFFECT INTERPRETATION OF HbA1c RESULTS
Hemoglobin variants, elevated fetal hemoglobin (HbF) and chemically modified derivatives of hemoglobin (e.g. carbonylated Hb in patients with renal failure) can affect the accuracy of HbA1c measurements	Any condition that shortens erythrocyte survival or decreases mean erythrocyte age (e.g., recovery from acute blood loss, hemolytic anemia, HbSS, HbCC, and HbSC) will falsely lower HbA1c test results regardless of the assay method used. Iron deficiency anemia is associated with higher HbA1c

Nephrotic syndrome

Overview

Symptoms

Treatments

A kidney disorder that causes the body to excrete too much protein in the urine.

Nephrotic syndrome is often caused by damage to small blood vessels in the kidneys that filter waste and excess water from the blood. An underlying health condition usually plays a role.

Rare

Fewer than 1 million cases per year (India)

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

Longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

Common

More than 1 million cases per year (India)

Treatment can help, but this condition can't be cured

Requires a medical diagnosis

Lab tests or imaging always required

Chronic: can last for years or be lifelong

A SILENT KILLER CKD STRIKES WITHOUT WARNING

WHAT IS KIDNEY FAILURE?

Kidney failure is known as Chronic Kidney Disease (CKD)

100ml per minute is the rate of filtering of blood by a healthy kidney

60ml per minute is a filtering rate which indicates CKD

5 STAGES OF CHRONIC KIDNEY DISEASE

WORRYING STATISTICS

In India, **1.36 lakh** adults die due to chronic kidney disease (CKD), which is more than AIDS

Within Telangana, certain pockets such as **Nellore, Srikakulam and Prakasam** have reported higher no. of kidney failure cases

RISK FACTORS

- Diabetes
- Hypertension or high blood pressure
- Recent history of kidney disease
- Family history of kidney diseases
- Obesity
- Cardiovascular disease
- High cholesterol

Earlier, kidney ailments were found in patients who would be above 50 years old

PATIENTS GETTING YOUNGER

- 5% below 30 years of age
- 40%

Final Report			
BIO CHEMISTRY			
Description	Result	Unit	Biological Ref. Range
BLOOD SUGAR F + PP Sample : Fasting Plasma			
FASTING BLOOD SUGAR Method : GOD-POD	116.6	mg/dl	80 - 120
POSTPRANDIAL BLOOD SUGAR Method : GOD-POD	H 177.3	mg/dl	80 - 140
Clinical Significance : Elevated glucose levels (hyperglycemia) are most often encountered clinically in the setting of diabetes mellitus, but they may also occur with pancreatic neoplasms, hyperthyroidism, and adrenocortical dysfunction. Decreased glucose levels (hypoglycemia) may result from endogenous or exogenous insulin excess, prolonged starvation, or liver disease. Postprandial glucose profile is determined by carbohydrate absorption, insulin and glucagon secretion, and their coordinated effects on glucose metabolism in the peripheral tissues.			
CREATININE Sample : Serum			
CREATININE Method : Modified Jaffe Method	H 3.52	mg/dl	0.6 - 1.4

21 TUESDAY

MRS. PUSHPA DIXIT (78563 00313)
AGE - 61 Y
131-B, RAJAPAT NAGAR
BEHIND PUNEMAPUR, INDORE

Patient was diagnosed with CKD and having high levels of Creatinine, Urea and Potassium. She was admitted in hospital for 2 weeks including 5 days in ICU. We have reached to Dr. Arpit Chopra Sir after 7 days. That time the creatinine level was 5.5. After taking medicines from Sir the creatinine level came down to 2.3 in 5 days and completely normal to 1.3 in 3 weeks. We have completed the treatment of 1 month and now she is completely fine and does not require further medication.

CURED!

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

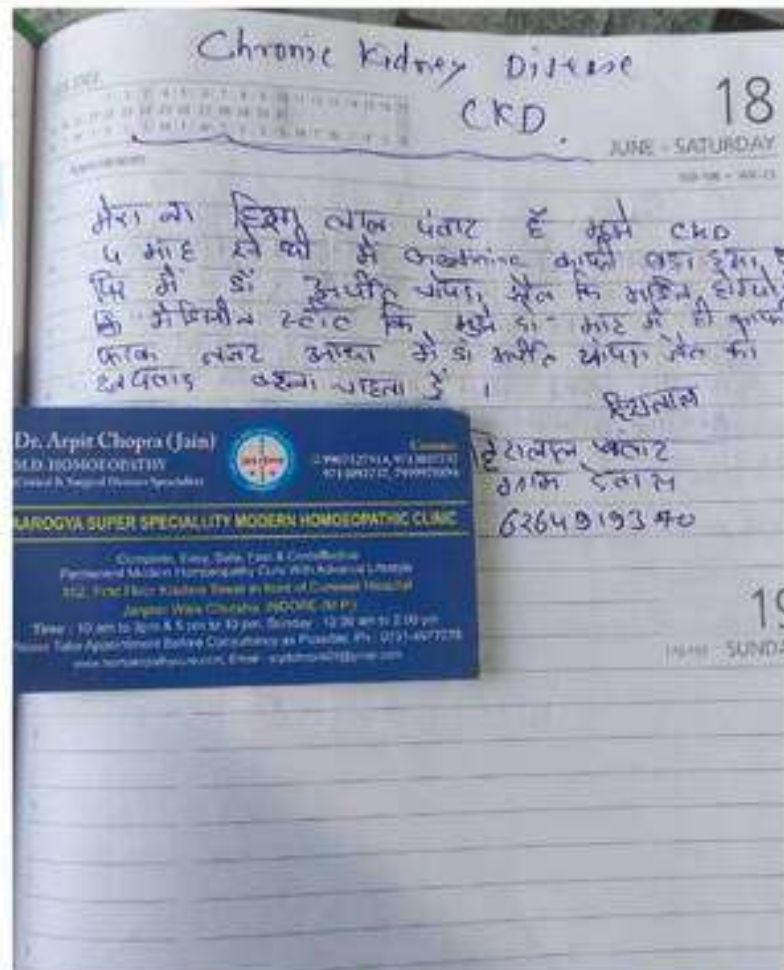

Longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

Common

More than 1 million cases per year (India)

- 🏠 Treatment can help, but this condition can't be cured
- 📅 Requires a medical diagnosis
- 🧪 Lab tests or imaging always required
- 🕒 Chronic: can last for years or be lifelong

IgA Nephropathy Treatment

APOLLO HOSPITALS

Dr. SURESH PRASAD
 Lab No: N/A 0212124
 Ref Doctor: DR VARUN

Issue submitted for IF studies show 13 glomeruli of which 11 are adorned with significant deposits of IgA.

Diagnosis/Comments:

- Kidney (nephric) biopsy shows significant global glomerular mesangial (2/122) and moderate tubulointerstitial changes of chronicity, deposits of IgA consistent with chronic IgA nephropathy.
- In addition significant vascular changes of hyaline arteriosclerosis are seen.

TESTS	RESULTS	UNITS	REFERENCE RANGE
Serum CREATININE	7.68	mg/dl	0.60 - 1.10
Serum Uric Acid	6.81	mg/dl	2.3 - 6.0
BUN	42.7	mg/dl	5 - 20

Remark: - Sample processed on ERBA, EM-200 fully automated biochemistry analyser. Sample type - Serum kindly correlate clinically.

Handwritten notes:

Δ CKD : 5 months
S. creatinine : 13-29 maximum : (14-48)
Urine output : Low.
On dialysis (twice in a week).
- Small left renal cortical cyst
- few enlarged mediastinic lymph nodes larger on medial 19x8mm.

Kidney stone

Also called: nephrolithiasis

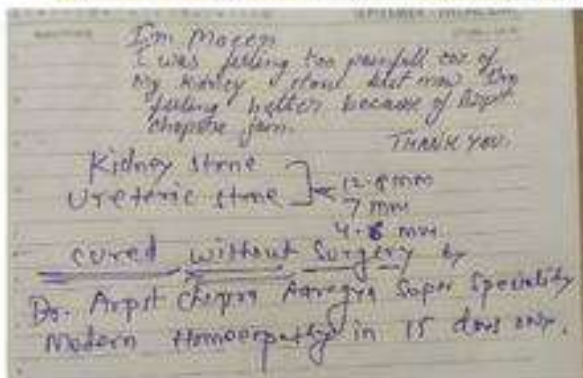

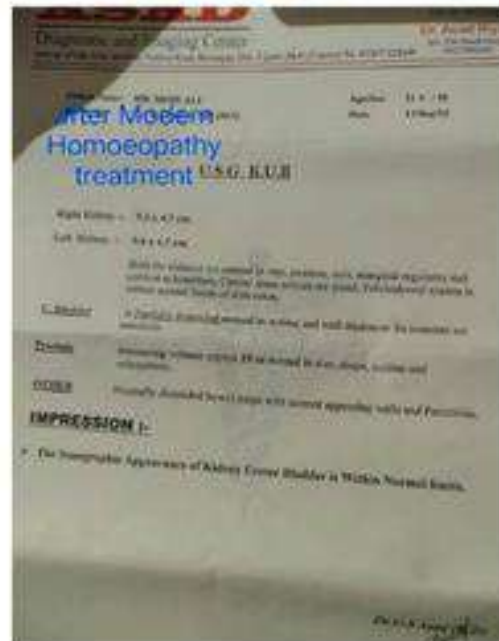

Overview

Symptoms

Treatments

A small, hard deposit that forms in the kidneys and is often painful when passed.

Kidney stones are hard deposits of minerals and acid salts that stick together in concentrated urine. They can be painful when passing through the urinary tract, but usually don't cause permanent damage.

कैसर, किडनी फेलियर, अस्पताल में गंभीर रूप से भर्ती मरिजों का उपचार, कोमा, शल्य चिकित्सा योग्य रोग, ऑटो इम्यून रोग, जीवनभर दवाई लेने वाले रोगों की रोकथाम एवं 300 प्रकार के असाध्य जटिल रोगों की चिकित्सा।

before treatment

ULTRASOUND OF ABDOMEN

NO SW FREE FLUID IN PERITONEAL CAVITY

LIVER is normal in size and homogenous in echotexture. No focal mass lesion. No capsular thickening noticed on the lateral, CRT & PV NOMALS.

GALL BLADDER is well distended and appears normal. NO CHOLELITHS. No wall thickening or echogenic sludge noticed. No pericholecystic fluid collection.

SPLEEN & PANCREAS
Spleen is normal in size and echotexture. No focal mass lesion or perisplenic fluid collection noticed in size and echotexture.

RIGHT KIDNEY is normal in size and echotexture. No hydronephrosis or calculi noticed. Corticomedullary differentiations are preserved on the both sides.

LEFT KIDNEY shows SIMPLE CORTICAL CYST OF SIZE 3MM X 2MM.

URINARY BLADDER is well distended and appears normal. No echogenic material noticed within it. A normal sized prostate is noticed normal sized.

PROSTATE is normal in size and echotexture.

DEPRESSION / Normal examination of liver, gall, spleen, pancreas, both L & R Kidney.

Chronic kidney disease

Also called: CKD

ABOUT

SYMPTOMS

TREATMENTS

Often has no symptoms and is diagnosed by blood test

Longstanding disease of the kidneys leading to renal failure.

Common

More than 1 million cases per year (India)

Treatment can help, but this condition can't be cured

Requires a medical diagnosis

Lab tests or imaging always required

CHL-Laboratory
committed to quality

BIOCHEMISTRY

Creatinine - Creatinine is a waste product formed in muscle from the high energy molecule creatine phosphate. The amount of creatinine produced is proportional and is primarily a function of muscle mass. It is removed from plasma by glomerular filtration and then excreted in urine with only a small reabsorption by the tubules. Creatinine is a useful indicator of renal function.

Elevated creatinine level is usually associated with various renal disorders like acute or chronic renal failure. Elevated creatinine level is a sensitive index of impaired renal function.

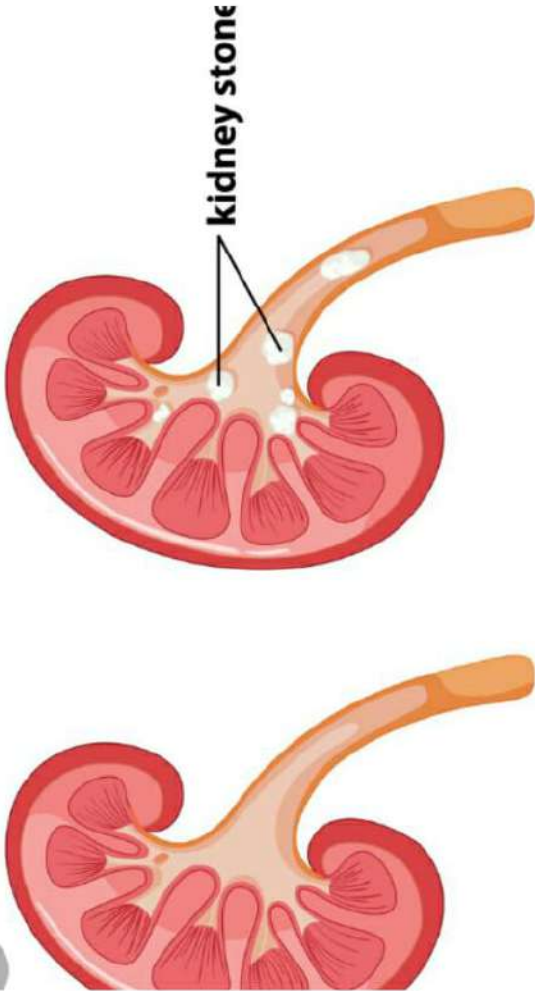

Blood Urea Nitrogen - Urea is a waste product formed in muscle from the high energy molecule creatine phosphate. The amount of urea produced is proportional and is primarily a function of muscle mass. It is removed from plasma by glomerular filtration and then excreted in urine with only a small reabsorption by the tubules. Urea is a useful indicator of renal function.

Elevated urea level is usually associated with various renal disorders like acute or chronic renal failure. Elevated urea level is a sensitive index of impaired renal function.

Prevention of chronic kidney disease

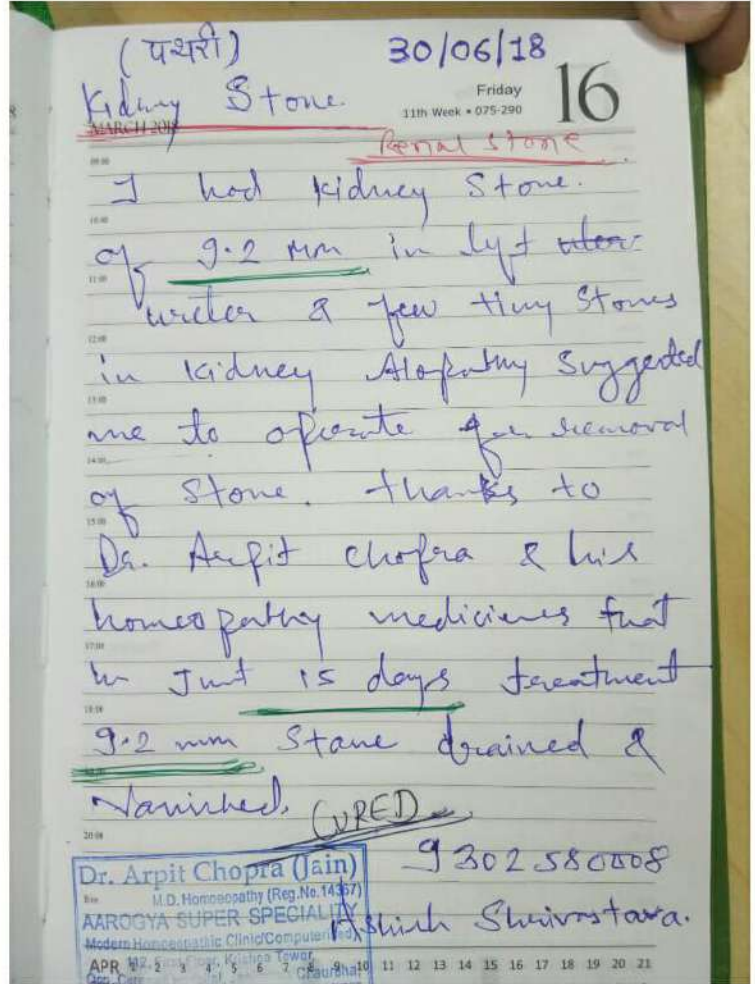

- Stop smoking
- Reduce salt intake
- Eat a heart-healthy diet rich in fruits and vegetables
- Exercise regularly and maintain a healthy weight
- Control diabetes and monitor HbA_{1c} levels
- Control high blood pressure with kidney-protective blood pressure medications

 Ref. by - HOSPITAL

Dr. Siddharth Amb
 Radiologist(MBBS,DMRD)
 REG.NO-14536

USG WHOLE ABDOMEN

LIVER - Enlarged (15.7cm) in size, smooth in contour and shows homogeneously hyperechoic parenchymal echotexture. No mass lesion seen. Intrahepatic biliary channels are not dilated. Hepatic and portal venous channels are normal.

L. BLADDER - Measures normal in calibre. Portal Vein measures normal in calibre. Is normal in size, shape and echotexture, is well distended and shows anechoic lumen. Its wall thickness is normal.

CREAS - Is normal in size, shape and echotexture. No dilatation or calcification seen. Measures 11.3cm in long axis, normal in size. Shows smooth contour and normal homogeneous parenchymal echotexture.

KIDNEY - On right side is normal in shape, size and echotexture. Right Kidney measured 11.4 x 3.9 cm. Left Kidney measured 12.5 x 5.1 cm. Surfaces are smooth. Corticomedullary differentiation is well demarcated. Pelvicocal system is compact on right side.

URINARY BLADDER - Is central, smooth in contour with anechoic lumen. Its walls are of normal thickness and echogenicity. Amount of post void residual urine is insignificant. Measures 18.4 cc in volume (approx) and its pararenal echotexture is normal.

MARKS -

- Minimal hepatomegaly noted involving both lobes with mild diffuse increase in hepatic parenchymal echogenicity seen, however normal visualization of diaphragm and intrahepatic vessels borders, suggestive of grade - I fatty liver.
- A 9.2 mm sized calculus noted in left lower ureter leading to left sided grade-I hydronephrosis, with no renal parenchymal thinning noted.
- Few tiny concretions also seen in the left kidney measuring upto 2-3mm in long axis.
- Gall bladder, spleen, common bile duct, intrahepatic biliary channels, right kidney, urinary bladder & pancreas appear normal.

Rest of the studied abdominal organs appears normal.

REVISION → Ultrasound study of abdomen shows:-

- Minimal hepatomegaly with grade - I fatty liver.
- Left lower ureteric calculus (9.2mm).
- Few tiny left renal concretions.

REPORT
USG OF KUB REGION

Real time sonography of 'KUB REGION' shows:
RT KIDNEY: is normal in shape size and echogenicity. Parenchyma is normal in thickness. Corticocentral differentiation is clear. A simple exophytic cyst measuring 2.07 X 2.32cm seen at lower pole. Pelvicalyceal system is compact. No hydronephrosis seen. No renal calculus seen. Perirenal areas normal. RK measures 9.73 x 2.75 CMS.
LT KIDNEY: is normal in shape size and echogenicity. Parenchyma is normal in thickness. Corticocentral differentiation is clear. Pelvicalyceal system is compact. No hydronephrosis seen. No renal calculus seen. Perirenal areas normal. LK measures: 9.88 x 2.94CMS.
BOTH URETERS: Are normal not dilated.
URINARY BLADDER: Lumen is anechoic nonlithiasic. Wall shows prominent trabeculations. Pre void bladder volume is 481cc | Postvoid residue is significant. (292cc)
PROSTATE: Is markedly enlarged in size, normal shape and echogenicity. Parenchyma is homogenous No focal mass seen. Capsule is intact. Prostrate measures 5.78 x 4.87 x 5.29 cms. Approx. wt. 77.95 gms.

IMPRESSION:

- RIGHT RENAL CORTICAL CYST.
- MARKEDLY ENLARGED PROSTATE WITH SIGNIFICANT POST VOID RESIDUAL URINE WITH BACK PRESSURE CHANGES IN BLADDER.

Client Address :

CLINICAL BIOCHEMISTRY

Test Name	Obtained Value	Units	Bio. Ref. Intervals(Age/Gender specific)
*Prostate Specific Antigen (Total PSA)	2.97	ng/mL	0 - 4.0

Comments:
* Prostate specific antigen (PSA) is a single chain glycoprotein enzyme found in the epithelial cells lining the wall and ducts of the prostate gland.
* PSA is normally found in the serum of all men, but elevated PSA is observed in the serum of most with normal benign hyperplasia and prostate gland cancer.
* PSA is not elevated in the serum of those without prostate disease or in the serum of those having PSA levels increase in their whole span of the prostate gland.

Method: Chemiluminescence
Correlate Clinically

NAME: S L JAIN AGE: 75 Years SEX: Male
LAB REF NO: 18284555 ACCESSION NO: 001FK064812
CONDUCTED ON: 22/11/2017 00:00 REGISTERED ON: 13/11/2017 03:51 REPORTED ON: 23/11/2017 09:15
Result Status: Final REFERRED BY: DR. N. SHAH NS

Tests	Results	Biological Reference Range	Units
BIOCHEMISTRY			
PSA (PROSTATE SPECIFIC ANTIGEN) TOTAL SERUM			
PSA TOTAL	10.178	High < 4.0	ng/mL

Method: CHEMILUMINESCENT IMMUNOASSAY (CMIA) (COBE)

Interpretation:
Prostate Specific Antigen (PSA) is prostate tissue specific, secreted by both normal and neoplastic prostate tissue. PSA level is the collective measurement of free PSA and PSA bound to serum. Test forms are comprised of antibody conjugate: alpha 2 macroglobulin and alpha 2 anti-chryzopyrin and third form is not PSA. **High PSA = PCa.**

Monitoring patients with history of prostate cancer as an early indicator of recurrence and response to treatment.
Possible cancer screening. Positive with PSA levels >12 ng/mL, have >50% probability of prostate cancer.
Prostate Diseases: Cancer, Prostatitis, benign prostatic hyperplasia, prostatic hyperplasia, acute urinary retention.
Hypertension such as Prostatic massage, cystoscopy, needle biopsy, transurethral resection, digital rectal examination, voiding catheter, vigorous pelvic exercise.
Thrombotic Thrombocytopenia
Hypertension
Sedatives, Antandrogen drugs, Radiation therapy, Prostatectomy

Precaution:
It is recommended to use same assay method for long term monitoring.
It should be taken in interpreting results from patients taking drugs such as Biotin, Finasteride and Phthalates which are known to increase PSA levels.

REPORT

Pt. Name:	MR. DINESH JAIN	Age/Sex:	43 Years /Male
Ref. By:	DR HUNAID F KAGALWALLA	Date:	01/Sep/2017

USG WHOLE ABDOMEN

LIVER: Is normal in size, shape and raised echotexture. Margins are smooth and regular. Intra and extrahepatic biliary and vascular channels are normal. No evidence of any focal or diffuse mass lesion seen.

GALL BLADDER: Reveals tiny immobile echogenic foci attached to posterior GB wall. Its walls are of normal thickness. No pericholecystic pathology seen.
 - CBD & PV is of normal calibre.

RIGHT KIDNEY: Is enlarged in size measuring 21x10 cm and is completely replaced by multiple cystic lesions largest measuring 2.8x2.7cm.

LEFT KIDNEY: Is enlarged in size measuring 23x11 cm and is completely replaced by multiple cystic lesions largest measuring 6.1x4.6cm.

SPLEEN: Normal in size, shape & echotexture.

PANCREAS: Is normal in size, shape and echotexture. Pancreatic duct is not dilated.

URINARY BLADDER: Is central smooth in contour & reveal a clear lumen. Its walls are of normal thickness.

PROSTATE: appears normal in size (25cc), shape and echotexture.
 - No evidence of retroperitoneal lymphadenopathy / Ascites seen.

IMPRESSION: - USG STUDY REVEALS (K/C/O PKD)

- > Bilateral renal polycystic kidney disease.
- > Grade I fatty liver.
- > Tiny GB polyp.

Thanks for the reference.

USG WHOLE ABDOMEN

HISTORY OF --

The sonography of whole abdomen reveals:

Diaphragm are showing normal movements with respiration.

HEPATO-BILIARY SYSTEM - Appears normal in shape, size, & echotexture. Biliary & portal channels are normal. Hepatic veins are normal. No evidence of any focal or mass lesion seen.

GALLBLADDER - Reveals a clear, anechoic, non-lithiatic lumen. Its walls are of normal thickness. No pericholecystic pathology seen.

COMMON BILE DUCT - Is normal in course & calibre. CBD - 2mm

PORTAL VEIN - Is normal in course & calibre. PV - 9mm

PANCREAS - Appears normal in shape, size & echotexture. Pancreatic duct is not dilated.

SPLEEN - Is normal in shape, size & echotexture.

KIDNEYS - Bilateral Kidneys are grossly enlarged with polycystic changes. No calculus seen.
 Right Kidney- 200 x 95mm & Left Kidney- 220 x 110mm

PERITONEUM - Is grossly normal. No obvious pathology seen.

FOSSAE - Bilateral Iliac Fossae are grossly normal.

URETERS - Are normal in course & calibre.

All investigations have their own limitation. The above report is an opinion and not the final diagnosis. This is to be used as a guide only. In case of any discrepancy a review may be asked. It is also patient's responsibility to cross check the report with the clinical profile. In case of any discrepancy a review may be asked.

Renal cyst

A renal cyst or kidney cyst, is a fluid collection on or in the kidney

HEALTH CONDITIONS RELATED TO THIS SEARCH

Polycystic kidney disease

An inherited disorder in which clusters of cysts develop in the kidneys.

Symptoms may include

- Kidney damage
- Back pain
- Blood in urine

Cyst

WHOLE ABDOMEN SONOGRAPHY

Liver is enlarged (Span 14.0 cm at SAC). Parenchymal echotexture is normal. No focal lesion is seen. Intrahepatic biliary radicles are undilated.

Gall bladder is normally distended. Walls are thin. No sludge & calculi seen. No peri GB collection is noted.

Portal vein & CBD are normal in caliber. Pancreas is normal in shape & size. Parenchymal echoes are normal. Pancreatic duct is undilated.

Spleen is normal (6.7 cm). No focal lesion seen.

Both kidneys are normal in position & size. Right kidney is 9.9 x 5.5 cm & left is 10.4 x 6.4 cm in size. Cortical echoes are normal. Pelvicocolic system is undilated. Right kidney shows a 5-6 mm calculus in upper segment calyx.

Both ureters are undilated. No calculi seen at PUJ & UVJ.

Urinary bladder shows normal wall. Prevoid urine = 480 ml approx. Postvoid residual urine = 80 ml approx.

Prostate is enlarged in size. It measures 4.5 x 4.1 x 3.7 cm. Weight = 36-37 grams approx.

No significant Ascites. No pleural effusion. No significant bowel wall thickening / dilatation or lymphnodes are noted. There is bilateral direct inguinal hernia, neck increases upto 3.2 cm (Right) & 1.8 cm (Left) through which omentum is seen herniating on valsalva.

Impression:
 - Hepatomegaly.
 - Right renal calculus.
 - Prostatomegaly.
 - Bilateral inguinal hernia (Right & Left) partially reducible (Right).
 Clinical correlation / followup suggested.

WHOLE ABDOMEN SONOGRAPHY

Hepatic contour is smooth & spans normal. Parenchymal echotexture is normal. No focal lesion is seen. Intrahepatic biliary radicles are undilated.

Gall bladder is normally distended. Walls are thin. No sludge & calculi seen. No peri GB collection is noted.

Portal vein & CBD are normal in caliber. Pancreas was obscured by bowel gases.

Spleen is normal (6.1 m). No focal lesion seen.

Left kidney is normal in position & size. & left is 10.5 x 5.8 cm in size. Cortical echoes are normal. Pelvicocolic system is undilated. Right kidney is small otherwise morphologically normal. Right kidney is 7.7 x 4.2 cm.

Both ureters are undilated. No calculi seen at PUJ & UVJ.

Urinary bladder shows normal wall. Prevoid urine = 225 ml approx. Postvoid residual urine = 15 ml approx.

Prostate is enlarged in size. It measures 4.8 x 3.9 x 3.9 cm. Weight = 38 grams approx.

No significant Ascites. No pleural effusion. No significant bowel wall thickening / dilatation or lymphnodes are noted. There is bilateral direct partially reducible (Right) inguinal hernia, neck increases upto 2.5 cm (Right) & 2.3 cm (Left) through which omentum is seen herniating on valsalva.

Impression:
 - No hepatobiliary lesion seen.
 - Prostatomegaly.
 - Bilateral inguinal hernia (R > L).

USG WHOLE ABDOMEN

Liver is normal in size (13.2 cm) and shape. Its echogenicity is normal. Margins are smooth and regular. The portal vein and biliary radicals are normal in calibre.

GB is well distended. Wall thickness is normal. CBD is within normal limits.
 Pancreas is normal in size, shape and echo pattern.
 Spleen is normal in size (9.6 cm) and echo pattern.

RL Kidney: 11.5 x 4.5 cm Lt. Kidney: 9.7 x 3.6 cm
 Left kidney shows mild dilatation of PC system. There is significant thinning of left renal cortex (upper pole-4.5 mm). There is also s/o approx. 7.1 mm calculus in lower pole of left kidney. Right kidney also show 4.1 mm calculus in lower pole and concretion in mid pole. Right kidney is normal in shape, size and echo texture.

Urinary bladder is normally distended with normal wall thickness.

Prevoid urinary volume: 292.8 cc.
 Post void urinary volume: 12.0 cc ✓

Prostate is normal in size, shape & echo texture.

No evidence of ascites / significant lymphadenopathy.

Impression:
 ➤ Left hydronephrosis with thinning of left renal cortex.
 ➤ Bilateral renal calculus.

Adv: clinicopathological with Renal nuclear scan correlation for further evaluation & follow-up scan

Impression: owing to technical & biological limitations in case of any error in any study, the doctor cannot be held responsible for claim of damages of any nature and this report is not valid for any medicolegal aspect.

Medical Laboratory Report

Patient: **BASANT KUMAR**
 PID NO: P31180060466
 Age: 69 Year(s) Sex: Male

Reference: **Dr. ARPIT CHOPRA**
 Sample Collected At: **SAI KRIPA DIAGNOSTIC SHOP NO. 3, RANI BAGH MAIN KHANDWA ROAD LIMBODI INDORE. 452017**

Registered On: 06/12/2018 12:41 PM
 Collected On: 06/12/2018
 Reported On: 06/12/2018 05:40 PM

Investigation	Observed Value	Unit	Biological Reference Interval
creatinine (Serum uremia concentration measurement)	13.3 ↑↑	mg/dL	0.6-1.3
Iric Acid (Serum Uricate peroxidase)	7.4	mg/dL	4.0-7.0
TSH (Ultra sensitive) (Serum ECLIA)	8.67	μIU/mL	0.54-5.3

Interpretation:

- As per published literature and internal verification studies, TSH values on Cobas by ECLIA method gives higher values (~30%) than Abbott CMA, Horco, suggested biological reference intervals for Roche ECLIA is 0.54-5.3 microIU/ml. Reference: Clinical Chemistry 50:12, 2338-2344 (2004) and Ind J Clin Biochem (Apr-June 2014) 29(2): 189-195. AACE (American association of clinical endocrinology) recommends TSH by BH as 0.45 to 4.5 microIU/ml. Any values between 4.5 to 10 microIU/ml should be correlated clinically and repeated to rule out physiological variations.
- TSH results between 0.1 to 0.45 require correlation with patient age & clinical symptoms. As with increasing age, there are marked changes in thyroid hormone production, metabolism & its actions resulting in an increased prevalence of subclinical thyroid disease.
- TSH values may be transiently altered because of non thyroidal illness like severe infections, liver disease, renal and heart failure, severe burns, trauma and surgery etc.
- Drugs that decrease TSH values e.g. L-dopa, Glucocorticoid drugs that increase TSH values e.g. Iodine, Lithium, Amiodarone. Patients on Biotin supplement may have interference in chemoluminescence assays. Ref: Arch Pathol Lab Med—Vol 141, November 2017. With individuals taking high dose Biotin (more than 5 mg per day) supplements, at least 8-hour wash time before blood draw is recommended.

METHOD : CALCULATED PARAMETER				

Interpretation(s)
 MICROALBUMINURIA, URINE
 MICROALBUMINURIA, URINE

Microalbuminuria is defined as an increase in urinary secretion of albumin above the reference interval for healthy nondiabetic subjects but at a concentration that is generally detectable by crude clinical tests such as dipsticks designed to measure total protein. The diagnosis of microalbuminuria requires demonstration of increased albumin secretion in at least two out of three urine samples collected in the absence of infection or an acute metabolic crisis.

It is now considered a clinically important indicator of deteriorating renal function in diabetic subjects. In diabetic patients, regular screening of urinary albumin secretion is valuable in monitoring both type 1 and type 2 diabetes.

Screening should commence 5 years after diagnosis in patients with type 1 diabetes and at diagnosis in patients with type 2 diabetes without proteinuria.

Screening is not indicated in patients with asymptomatic proteinuria, and the patients with diabetes mellitus should be screened on annual basis upto the age of 75 years.

It is important to consider causes of increased albumin excretion, especially in cases of type 1 diabetes present for less than 5 years. These can include nondiabetic renal disease, menstrual contamination, vaginal discharge, uncontrolled hypertension, urinary tract infection, heart failure, and strenuous exercise.

Kidney failure

Also called: renal failure

A condition in which the kidneys lose the ability to remove waste and balance fluids.

MOST COMMON TYPES

Chronic kidney disease

Longstanding disease of the kidneys leads to renal failure.

Acute renal failure

A condition in which the kidneys suddenly can't filter waste from the blood.

Complete, Easy, Fast & Cost-effective Permanent Modern Homoeopathy Cure With Advance Lifestyle

Dr. Arpit Chopra (Jain) is a specialist in Critical & Surgical Diseases. He has a B.A. in Homeopathy from the University of Applied Sciences, Germany. He has also completed his M.D. in Homeopathy from the University of Applied Sciences, Germany. He has been practicing Homeopathy for over 10 years. He has a special interest in the treatment of Chronic Kidney Disease, Diabetes, Hypertension, and other chronic conditions. He has a proven protocol for the treatment of Chronic Kidney Disease, which is safe, effective, and permanent. He has helped many patients with Chronic Kidney Disease to achieve long-term remission and improve their quality of life. He is a member of the Indian Association of Homoeopaths and the German Association of Homoeopaths. He is also a member of the International Association of Homoeopaths. He is a frequent speaker at homeopathic conferences and seminars. He has published several articles on homeopathy in various journals. He is a dedicated and compassionate practitioner who is committed to providing the best possible care to his patients. He is available for consultations in person or via telemedicine. He can be reached at the above phone numbers or via email at arpit@arogyahomoeopathy.com.

Kidney stone
 Also called: nephrolithiasis

OVERVIEW SYMPTOMS TREATMENTS

Stone passes through ureter and bladder

Often painful when passed

A small, hard deposit that forms in the kidneys and is often painful when passed.

Kidney stones are hard deposits of minerals and acid salts that stick together in concentrated urine. They can be painful when passing through the urinary tract, but usually don't cause permanent damage.

Age & Sex: 52 Yrs Male
Referred by: DR. SATISH OVRIAL MD (MED) Consultant

WHOLE ABDOMEN SONOGRAPHY

Hepatic contour is smooth & span (15.5 cm) is enlarged. Parenchymal echotexture is normal. CBD & Portal vein are normal in caliber. Intrahepatic biliary radicles are undilated. No focal lesion is seen.

Gall bladder is normally distended. Walls are thin. No sludge or calculus seen.

Pancreas is normal in shape & size. Parenchymal echoes are normal. Pancreatic duct is undilated.

Spleen is normal (9.0 cm). No focal lesion seen.

Right kidney is 9.8 x 3.8 cm in size and normal in position, contour, echotexture and pcc undilated. **Right kidney shows well defined, cystic lesion of size 1.3 x 1.3 cm seen at lower pole.**

Left kidney is 8.9 x 4.7 cm in size and normal in position, contour, echotexture and pcc undilated. **Left kidney shows well defined, cystic lesion of size 1.5 x 1.5 cm seen at mid pole. Left kidney shows few tiny concretion of size 3 to 4 mm seen at mid pole.**

Urinary bladder shows normal wall & echo free lumen.
Pre-void urine = 150 ml (approx), post-void residual urine = 15 ml (insignificant).

Prostate is normal (weight 18 grams). Seminal vesicles are normal.

No significant retroperitoneal lymphadenopathy seen.

No free fluid seen in peritoneal cavity.

The dependent pleural recess are normal.

**IMPRESSION: 1. HEPATOGALYGLY,
2. BILATERAL RENAL CORTICAL CYST,
3. LEFT RENAL CONCRETION.**

WHOLE ABDOMEN SONOGRAPHY

Hepatic contour is smooth & span (15.95 cm) is enlarged. Parenchymal echotexture is raised. No focal lesion is seen. Intrahepatic biliary radicles are undilated.

Gall bladder is normally distended. Walls are thin. No sludge or calculus is seen.

CBD & Portal vein (8.6 mm) are normal in caliber.

Visualized part of Pancreas is normal in shape & size. Parenchymal echoes are normal. Pancreatic duct is undilated.

Spleen is normal (7.94 cm). No focal lesion seen.

Both kidneys are normal in position & size. Renal contour is smooth. Cortical echoes are normal. Pelviccalyceal system is undilated. **Right kidney is 10.4 x 4.2 cm and left kidney is 10.3 x 3.6 cm in size. Anechoic cystic lesion of size 2.2 x 2.1 cm seen in left kidney suggestive of simple left renal cortical cyst.**

Urinary bladder shows normal walls & echo free lumen.
Pre-void urine = 142 ml (approx), post-void residual urine = 16 ml (approx).

Prostate is normal (Weight 16 grams). Seminal vesicles are normal.

No significant retroperitoneal lymphadenopathy seen.

No free fluid seen in peritoneal cavity. The dependent pleural recess are normal.

**IMPRESSION:- HEPATOMEGALY WITH FATTY INFILTRATION OF LIVER GRADE I.
SIMPLE LEFT RENAL CORTICAL CYST.**

SONOGRAPHY
USG WHOLE ABDOMEN(MALE)

Liver is normal in size (13.7 cm), shape and echotexture. No focal parenchymal lesion noted. Portal vein is of normal caliber. There is no evidence of dilatation of Intra and extra hepatic biliary radicals.

Gall bladder appears normal. Does not show any sludge or calculus. Its walls are smooth and normal in wall thickness.

Pancreas is normal in size, shape and shows normal echogenicity, no localised solid or cystic mass is identified in pancreas. Pancreatic duct is not dilated.

Spleen is normal in size (11.1 cm), and shows normal echogenicity, no localised or cystic mass is identified in spleen.

Both kidneys are normal in size (Rt. 12.6 x 5.1 cm & Lt. 11.1 x 6.0 cm), shape and echotexture. **Right kidney reveals a calculus of size 7.5 mm in the lower pole calyx. Another calculus of size 5 mm is seen in the upper pole calyx. Left kidney reveals two calculi of size 9 mm in lower pole calyx & 6 mm in upper pole calyx. The left PC system is mildly dilated with dilatation of left ureter. There is a calculus of size 7 mm seen at the left VUJ.**

Visualised bowel loops appear normal.

No evidence of any adenopathy or ascitis.

Urinary bladder is partially filled with anechoic contents. The wall appears thin with smooth mucosa.

Prostate appears normal in size, shape and echotexture.

IMPRESSION: Left VUJ calculus with mild hydronephrosis. Bilateral renal calculi.

Kindly correlate.

SONOGRAPHY - WHOLE ABDOMEN

Liver is normal in size (13.3 cms) and echotexture. Intra and extrahepatic biliary radicals are not dilated. Hepatic vein & Portal vein appear normal & undilated. CBD is normal in caliber & undilated.

Gall bladder is well distended with echofree lumen. Wall thickness is normal.

Spleen is normal in size (10.9 cm) and echotexture. Visualized part of Pancreas is normal in size and echotexture.

Both kidneys are normal in size, shape, outlines & echogenicity. Mid cortical thickness and corticomedullary differentiation is normal. Pelviccalyceal system is undilated on both side. Both ureters are undilated. **Approx. 4.9 mm size calculus seen at lower pole of right kidney. Few calculus seen at upper and lower pole of left kidney largest measuring 9.8 mm at lower pole.**

Right kidney:- 11.3X5.6 cms. Left kidney:- 11.5X5.7 cms

IVC and abdominal aorta are normal in caliber. No evidence of intraabdominal lymphadenopathy & ascitis.

Urinary bladder is normal in shape & contours. Its wall is normal.

Prostate is normal in size shape and echotexture. Post void residual urine is insignificant.

IMPRESSION :- B/L RENAL CALCULUS.

किडनी रोग मुक्त अभियान
 इंदौर शहर के सुप्रसिद्ध डॉ चौपड़ा ने लार्डलाज किडनी रोग का अपनी रिसर्च और अनुभवों से बिना किसी दर्द और किसी साईड इफेक्ट के रोग का संपूर्ण निदान खोज निकाला है। इन दवाओं से 8-25 दिनों में रोग का बढना रुकने लगता है और रोगी का क्रियटिनिन कम होने लगता है और कुछ ही माह में किडनी रोग से ठीक भी हुआ जा सकता है। विशेष अनुसंधान पर डॉ अर्पित चौपड़ा ने किडनी रोग मुक्त भारत अभियान शुरू किया है। जिसके अंतर्गत किडनी रोगियों को डॉ अर्पित चौपड़ा द्वारा एक माह की दवा उपलब्ध कराई जा रही है, जो की किडनी रोग की मुख्य दवा है। साथ ही बाहर के पेटेंट के लिये स्पेशल पोस्ट सुविधा भी दे रहे है।

- किडनी रोग के लक्षण -**
- 1 किडनी का झिकुझना
 - 2 मूत्र कट्पा रहना
 - 3 भोजन करते समय उल्टी आना
 - 4 कमर दर्द के साथ बजल घटना
 - 5 बकान व बजलीरी रहना
 - 6 पैरों में बार बार सूजन आना
 - 7 पैरों में लम्बे समय से सूजन होना
 - 8 पेशाब कम या न बनना
 - 9 पेशाब में एलब्यूमिन प्रोटीन का जाना
 - 10 क्रियटिनिन का ब-सजयना
 - 11 किडनी फेस्युअर दवा मिलने का पता -

क्रोनिक किडनी डिजीज

खास जानकारी लक्षण इलाज विशेषज्ञ

लंबे समय से चल रहा गुर्दे का रोग जिसके कारण गुर्दे काम करना बंद कर सकते हैं.

गुर्दे खून से बेकार और नुकसान पहुंचाने वाले पदार्थों और अतिरिक्त तरल को छानते हैं. गुर्दों के काम बंद करने पर यह खराब पदार्थ शरीर में जमा होने लगते हैं.

सामान्य

हर साल 10 लाख से ज़्यादा मामले (भारत)

Patient Name : Mr. Apoorv Rao
 Age : 33 Years Sex : Male
 Referring Doctor : Self Date : 19.10.2020

WHOLE ABDOMEN ULTRASOUND

FINDINGS:
 Liver is normal in size with mild diffuse increase in parenchymal echogenicity S/o Grade I Fatty changes. No intra or extra hepatic biliary duct dilatation. No obvious focal lesions.
 Portal vein is normal in caliber. CBD is not dilated.
 Gallbladder is contracted.
 Pancreas to the extent visualized, appears normal in size and echogenicity.
 Spleen is normal in size (9.2cms) and echopattern. No evidence of focal lesions.
 Right Kidney measures 11.7cm in length are normal in size and echopattern. Corticomedullary differentiation appears maintained. Corticomedullary differentiation appears maintained. A 13-14 mm calculus noted at UVJ causing mild hydroureteronephrosis.
 Left Kidney measures 10.9cm in length are normal in size and echopattern. Corticomedullary differentiation appears maintained. 6-7mm non-obstructing calculus noted in lower calyx.
 Urinary Bladder is well distended. No evidence of calculi or internal echoes.
 Prostate is normal in size, measuring 3.4x3.2x2.9cms (Weight about 17 gm) and echotexture.
 No obvious ascites.

IMPRESSION:

- Right UVJ calculus with mild back pressure changes & Left renal calculus
- Grade I Fatty Liver

INVESTIGATIONS

RESULTS	REFERENCE INTERVAL
BIOCHEMISTRY	
UREA	55
Urea :- Protein Cannot be stored in human body, in excess should be broken down. Amino acids which form the components of proteins, break down to give ammonia. This is toxic & so through a series of chemical reaction (Urea cycle) non toxic urea is produced this is in the blood which is filtered out in kidney & secreted in the urine. Elevated levels are seen during increased protein breakdown, dehydration, vomiting, diarrhoea. Also seen in any kind of renal disorder like glomerular nephritis, chronic nephritis Decreased levels are found in liver failure & Nephritic syndrome.	
CREATININE	6.70
Creatinine:- Creatinine is a waste product formed in muscle from the high energy storage compound, creatine phosphate. The amount of creatinine excreted in the urine depends on the amount of muscle mass in the body.

Chronic kidney disease

Also called: CKD

OVERVIEW SYMPTOMS TREATMENTS NEWS

Longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

Common

More than 1 million cases per year (India)

Treatment can help, but this condition can't be cured

Received : 11/12/2020 1:46:00PM
Reported : 11/12/2020 3:07:38PM
Report Status : Final

Test Name	Results	Units	Bio. Ref. Interval
CREATININE, SERUM (Compensated Jaffe's reaction, IDMS traceable)	18.47	mg/dL	0.70 - 1.20
ADVICE: CKD RISK MAP KDIGO guideline, 2012 recommends Chronic Kidney disease (CKD) should be classified based on cause, GFR category and albuminuria (ACR) category. GFR & ACR category combined together reflect risk of progression and helps clinician to identify individuals who are progressing at more rapid rate than anticipated			
UREA, SERUM (Urease UV)	188.41	mg/dL	16.60 - 48.60

Patient Name : DR. VINOD PATIDAR	Consultant :	Date. 16/09/2020
Age & Sex: 29 Year Male	Reference: DR. SELF	Lab ID. R4 54435

BLOOD EXAMINATION

Test	Observed Value	Units	Biological Reference Interval
Urea (UREASE Method)	218.0 H	mg/dL	10 - 45
Creatinine (ENZYMATIC CREATININE - Advance Method)	18.6 H	mg/dL	0.60 - 1.40

Tests are performed on "EM360" (Fully Automated Differential Grating Based Biochemistry Analyser)

WIDAL TEST

Test	Observed Value	Units
S. typhi 'O'	Negative	
S. typhi 'H'	Negative	
S. Para Typhi 'A'	Negative	
S. Para Typhi B.	Negative	
METHOD	Agglutination Method	

A positive Widal test is based on a fourfold rise in agglutinins in repeated tests taken 7 to 10 days apart or a titre of 1:160 or greater in a single test. Clinically, however, this is rarely demonstrated and two to three fold rises are more commonly seen. Although effective treatment early in the disease appears to prevent further antibody rise.

Chronic Kidney Disease
CKD Saturday 28 NOVEMBER

मेरा नाम शारदा रजगढ़ है। मैं जबकि पिछले रजगढ़ का निवासी हूँ। मेरे पिता भी शरद रजगढ़ की किडनी की शकल हो गई थी। उनका दो बार डायलिसिस भी हुआ था। किडनी उनका क्रेतेनिन 9 एवं क्रेतेनिन 197 से कम नहीं हुआ। क्रेतेनिन 197 डायलिसिस के पहले 11 पर पड़ चुका था। मेरे पिताजी का ब्रान 33 से कम के लगभग रखा फिर दोबारा डायलिसिस के अंतर्गत डायलिसिस भी उनके किडनी को बचाने का काम था। मैं जबकि 15 दिनों के अंतर्गत डायलिसिस भी किया है। किडनी के फेलियर भी हुआ था। फिर हमें डॉ. अरुण जी का पता मिला। उन्होंने मॉडर्न होम्योपैथी की शकल ही किडनी 15 दिनों के अंतर्गत 5.22 को कर दिया 1.47 हो गया। आपकी शकल ही किडनी को बचाने का काम है। डॉ. अरुण जी का नाम है।

Name : MRS. SAGAR
Referred By : DR. ARPIT CHOPRA
Drawn On : 30-Aug-2017 14:50
Accession No.: 1708115804

Age: 54 Years Sex: Female
Received On : 30-Aug-2017 14:51
Report Date : 01-Sep-2017 11:18
Reference No : 408

Parameter	Result	Unit	Biological Reference Interval
-----------	--------	------	-------------------------------

CHOLESTEROL

CHOLESTEROL, SERUM	306.18	mg/dL	upto 200
--------------------	--------	-------	----------

Method: Cholesterol Oxidase on Clinical Chemistry Autoanalyzer

INTERPRETATION:-

Age 18 & above Children ages 2-17:
< 200 - Desirable Desirable: <170 mg/dL
200- 239 - Borderline High Borderline high: 170-199 mg/dL
>240 - High High: > or =200 mg/dL
As Per National Cholesterol Education Program (NCEP) guidelines

URIC ACID, SERUM

Uric Acid, Serum	<u>6.38</u> ↑↑	mg/dL	2.6 - 6.0
------------------	----------------	-------	-----------

Method ; By Uricase Peroxidase on Clinical Chemistry Autoanalyzer

Interpretation: Increased levels are seen in Renal failure, Gout, Leukemias, Hemolytic anemias, Lymphomas and certain drugs. Uric acid decreases with certain drugs like Allopurinol, Cortisone etc.

Wallachs : Interpretation of Diagnostic Tests : Ninth Edition : 369.

CREATININE

Creatinine, Serum	0.57	mg/dL	0.50 - 0.90
-------------------	------	-------	-------------

Method : By Jaffe

INTERPRETATION : Increased creatinine levels occur in conditions which decrease the glomerular filtration rate. These may be pre-renal (eg, hypovolaemia, hypotension), renal or post-renal (eg, obstruction). An artefactual increase in creatinine is seen with some methods in the presence of ketones and some cephalosporins. Levels are lower in patients with a reduced muscle mass (e.g. Elderly) and this may conceal impairment of renal function.

Chronic Kidney Disease (CKD)

Chronic kidney disease (CKD) is a worldwide public health problem. It is slow progressive loss of kidney function over the span of years, resulting in permanent kidney failure.

Causes:

- Diabetes
- Hypertension
- Glomerulonephritis
- Reflux nephropathy
- Kidney stones
- Prostate disease
- Kidney cancer
- Reflux nephropathy
- Sickle cell anemia
- Polycystic kidney disease

Signs & Symptoms:

- Fatigue
- Restlessness
- Reduced urine
- Nausea
- Vomiting
- Drowsiness
- Confusion
- Seizures
- Coma

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

Specialists

A longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

USG ABDOMEN SCREENING WITH PRINT

Bladder is enlarged in size (16.0 cm) & shows raised echotexture. Margins are smooth. No HBB. Distention seen.

Right kidney is normal in size (10.7x3.8 cm), outline and position. Cortical echogenicity is normal with maintained CMD. The PCS & ureter dilated.

Left kidney is not seen in left renal fossa. Status post-operative.

Urinary bladder is well distended with thick & irregular wall & low level internal echoes within. Multiple diverticula formation seen in bladder wall.

Prostate is mildly enlarged in size (30 grams) shows normal outline & echotexture.

No evidence of ascites and significant lymph nodes seen.

Impression:
Status post total nephrectomy.
Features of severe cystitis.
Right hydronephrosis with renal parenchymal disease.
Mild hepatomegaly with hepatic steatosis.
Grade-I prostatomegaly.

KUB PVR SONOGRAPHY

Left kidney: Not seen (post operative).

Right kidney: 11.3x5.7cm.
Right kidney is of normal size. Margins are irregular. Parenchymal echoes appears raised with loss of cortico medullary differentiation. No evidence of any focal pathology or calculus noted. Focal calyceal dilatation is seen, in upper and lower pole.

Urinary bladder is well distended and shows wall irregularity and thickening suggestive of cystitis. Multiple (2 to 3) focal outpouching are seen along right lateral wall of urinary bladder, suggestive of diverticuli.
Prevoid volume: 210ml.
Postvoid residue: 92ml.

Prostate is 4.2x4.2x4.1cm in size. Margins are smooth. Echotexture is normal. Volume = 39ml.

CONCLUSION:
- Echogenic right kidney with focal caliectasis, as described above.
- Prostatomegaly with significant postvoid residue.
- Cystitis with urinary bladder diverticulae.

Suggest :- RFT correlation.

Reporting has been done as per the structural images obtained which may please be correlated clinically with other relevant investigations for interpretation. This report is not valid for MLG purpose.

P. NAME: MR YASH DAMOR AGE/SEX: 24 Years/M
 REF BY: Dr. JITENDRA BANSAL DATE: 18-Dec-2024

WHOLE ABDOMEN (M) SONOGRAPHY

Liver, Spleen, Pancreas are normal in size, shape & echotexture. Biliary channels are normal.
 C.B.D., Portal vein, major vessels are normal in calibre.
 Gallbladder is thin-walled with echofree lumen.
 Both kidneys are normal in size, shape & echotexture. Corticomedullary differentiation is maintained.
There is mild left hydronephrosis due to a 10 mm calculus in upper ureter.
 Urinary bladder is thin-walled with echofree lumen.
 Prostate is normal in size, shape & echotexture.
 Post-voiding Residual urine is insignificant in amount.
 No ascites. No obvious lymphadenopathy.

Before Treatment

IMPRESSION

- Left ureteric calculus with mild hydronephrosis.

Dr. Raju Premchandani
 MBBS, DMRE

Patient Name : Mr. YASH DAMOR Sample ID : 2122415491 View Report
 DOB/Age/Sex : 23 years/Male Registered : Dec 30, 2024, 07:14 p.m.
 Mobile : 7980344684 Collected On : Dec 30, 2024, 07:14 p.m.
 Referred By : Dr. Chopra Arpit Jain (MD Homoeo) Received On : Dec 30, 2024, 07:35 p.m.
 Organization : N/A Approved On : Dec 30, 2024, 07:35 p.m.

WHOLE ABDOMEN SONOGRAPHY

Liver is normal in shape and contour is smooth. Hepatic span (12.6 cm) is normal. Parenchymal echotexture is normal. No focal lesion is seen. Intrahepatic biliary radicles are undilated.
 Gall bladder is normally distended. Walls are thin. No sludge & calculi seen. No peri GB collection is noted.
 Portal vein & CBD are normal in calibre.
 Pancreas is normal in shape & size. Parenchymal echoes are normal. Duct is undilated.
 Spleen is normal (8.6 cm). No focal lesion seen.
 Both kidneys are normal in position & size. Right kidney is 10.7 x 4.2 cm & left is 9.9 x 4.3 cm in size. Cortical echoes are normal. Pelvicocolic system is undilated. Both ureters are undilated. No calculi seen at PUJ & UVJ.
 Urinary bladder shows normal walls & echofree lumen. No intra luminal lesion or calculi seen.
 Prostate is normal in size & measures 3.5 x 3.4 x 2.8 cm (vol 17 cc).
 No significant Ascites. No pleural effusion.
 No significant bowel wall thickening / dilatation or lymphnodes are noted.

[Impression]:
 - No hepatobiliary lesion seen.
 - Normal renal echotomatomy with undilated collecting system.
 Clinical correlation / followup suggested

Vision of Impossible to Possible

Kidney

Kidneys are the cornerstone vitality of our body.

THE VITAL ROLE OF KIDNEYS AND A NEW APPROACH TO KIDNEY HEALTH

The kidneys are indispensable organs that play a crucial role in maintaining our overall health. As natural filters, purifying the blood by removing unnecessary substances and excreting the waste. Proper kidney function is essential for the body's balance and well-being. When they fail to operate effectively, it can lead to severe health issues that impact the entire body. Without the appropriate intervention, kidney-related diseases can become life-threatening.

Common Kidney Diseases
Kidney disease can manifest in various forms, including:

- Kidney Stones:** Hard deposits that form in the kidneys and can cause pain and blockage.
- Chronic Kidney Disease (CKD):** A progressive loss of kidney function over time.
- Polycystic Kidney Disease:** A genetic disorder characterized by the growth of numerous cysts in the kidneys.
- Hypertensive Nephropathy:** A condition involving significant protein loss in the urine, leading to swelling and other issues.

Conventional Treatments and Their Limitations
Traditional allopathic medicine often addresses kidney disease through a series of interventions usually begins with medication, but may progress to more invasive procedures such as blood plasma treatments, dialysis, and, in severe cases, kidney transplants. While these methods can be effective, they often come with significant risks and drawbacks, including the need for ongoing treatment potential for serious side effects.

Modern Homeopathy Approach

Dr. Ajay Chopra Jain offers an alternative through his super-specific modern homeopathy practice. His approach is centered on the belief that preserving and healing our natural organs is preferable to replacing them with artificial or donor organs. According to Dr. Ajay Chopra Jain, maintaining the health of our kidneys through natural, holistic methods is both beneficial and safer.

Through his innovative homeopathic interventions, his has achieved remarkable success in curing patients with severe kidney-related conditions. His methods have enabled many individuals to regain their health and happiness without resorting to kidney transplants or invasive surgeries. By focusing on the body's natural healing processes.

Dr. Ajay Chopra Jain's approach offers a more conservative and potentially less costly path for recovery.

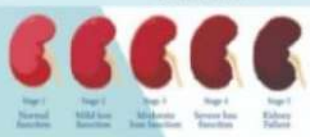

The Benefits of Modern Homeopathy for Kidney Health

Non-Invasive: Dr. Ajay Chopra Jain's treatment does not involve surgical procedures or invasive tests.

Holistic Healing: The approach aims to address root causes of kidney issues and promote overall well-being.

Long-Term Health: Patients treated with Dr. Ajay Chopra Jain's methods have reported lasting improvements in their kidney function and overall health.

Avoidance of Transplants: Many patients have been able to avoid the need for kidney transplants as an extreme measure.

- Stage 1 Normal Function
- Stage 2 Mild loss of function
- Stage 3 Moderate loss of function
- Stage 4 Severe loss of function
- Stage 5 Kidney Failure

BIOCHEMISTRY

CALCIUM, SERUM

CALCIUM	9.6	8.5-10.1	mg/dL
---------	-----	----------	-------

Method: ELECTROPHOTOMETRY ARS2400 II

Interpretation(s) : CALCIUM, SERUM-Common causes of decreased value of calcium (hypocalcemia) are chronic renal failure, hypoparathyroidism and hypovitaminosis D. Hypocalcemia (increased value of calcium) can be caused by increased parathyroid hormone (PTH) production, increased skeletal resorption (osteolysis), or a combination of mechanisms (primary hyperparathyroidism). Primary hyperparathyroidism and malignancy accounts for 90-95% of all cases of hypercalcemia. Values of total calcium is affected by serum proteins, particularly albumin. Thus, serum value should be taken into account when interpreting serum calcium levels. The following regression equation may be used: Corrected total calcium (mg/dL) = total calcium (mg/dL) + 0.8 (4 - albumin (g/dL)). Because regression equations vary among groups of patients in different physiological and pathological conditions, mathematical corrections are only approximations. The possible mathematical corrections should be replaced by direct measurement of free calcium by ISE (available with a) is a common and important source of analytical error in the measurement of calcium in biological tissues application during sampling. Thus, this along with that disturbing should be avoided before analytical.

RENAL FUNCTION TEST

Blood Urea Level	132	High	10-50	MG/DL
Sr.Creatinine	8.2	High	0.6-1.4	MG/DL
URIC ACID	3.1	Low	3.4-7.0	MG/DL

Chronic kidney disease

Also called: CKD

- Overview
- Symptoms
- Treatment

Longstanding disease of the kidneys leading to kidney failure.

PROGRESSION OF CHRONIC KIDNEY DISEASE (CKD)

RISK FACTORS FOR CKD MAY INCLUDE

- Heart Disease
- Diabetes
- High Blood Pressure
- Obesity
- Lupus
- Family History of CKD
- Age
- High Cholesterol

Preventing CKD and its complications is possible by managing risk factors and treating the disease to slow its progression and reduce the risk of complications

Nephrotic Syndrome / Nephritis

Handwritten notes on a lined paper with a date stamp 'MAR 21 10'. The text is in Hindi and discusses the symptoms and treatment of nephrotic syndrome. It includes a patient's name 'श्री. चन्देश्वर सिंह' and a phone number '501-81-9993141201'.

Nephrotic syndrome

Overview **Symptoms** **Treatments**

A kidney disorder that causes the body to excrete too much protein in the urine.

Nephrotic syndrome is often caused by damage to small blood vessels in the kidneys that filter waste and excess water from the blood. An underlying health condition usually plays a role.

Investigation	Observed Value	Unit	Biological Reference Interval
Urea Serum (Creatinine)	20.9	mg/dL	7.9-20
BUN-Blood Urea Nitrogen	88.81	mg/dL	7.9-20
Urea Serum Creatinine	188.34	mg/dL	17-43
Urea Serum Creatinine	11.79	mg/dL	0.5-1.2
Sodium	136	mmol/L	136-149
Potassium	5.9	mmol/L	3.5-5.0
Chlorides	101	mmol/L	98-106
CRP - C Reactive Protein	7.09	mg/L	<= 6.0

Interpretation:

- Measurement of CRP is useful for the detection and evaluation of infection, tissue injury, inflammatory disorders and associated diseases.
- High sensitivity CRP (hsCRP) measurements may be used as an independent risk marker for the identification of individual at risk for future cardiovascular disease.
- Increase in CRP values are non-specific and should not be interpreted without a complete history.

Reports to follow - Kindly await following pending reports:

Investigation	Status
D-DIMER Quantitative	Pending
Glucose Random	Recollect

Parameter	Result	Unit	Biological Reference Int
Creatinine	8.25	mg/dL	0.75 - 1.30

End Of Report

PROGRESSION OF CHRONIC KIDNEY DISEASE (CKD)

RISK FACTORS FOR CKD MAY INCLUDE

- Heart Disease
- Diabetes
- High Blood Pressure
- Obesity
- Lupus
- Family History of CKD
- Age
- High Cholesterol

NORMAL → **INCREASED RISK** → **KIDNEY DAMAGE** → **REDUCED KIDNEY FUNCTION** → **KIDNEY FAILURE**

Preventing CKD and its complications is possible by managing risk factors and treating the disease to slow its progression and reduce the risk of complications

FINAL DIAGNOSIS
 Nephrotic Syndrome (ICD 10 - N049) - Kidney Biopsy Report - Awaited
 Hypertrophic Cardiomyopathy (ICD 10 - I42.2)

HISTORY
 Mr. Gyanendra kataria 54 years male, known case of Hypertrophic Cardiomyopathy, presented with complaints of dirty and foggy urine since 2-3 months. Investigation showed Proteinuria. USG KUB showed Normal study. Presently admitted here for kidney biopsy and needful management.

Evaluation And Management
 Clinical Findings: Afebrile, Pulse 78/min, BP 130/80mmHg, CVS - S1+S2+, RS - Chest: Clear, PA - Soft, CNS - NAD.

PAST DIAGNOSIS
 H/D/HOCM

Summary of Key Investigations during Hospitalization: As per Report Attached

HOSPITAL STAY
 Under all aseptic precaution kidney biopsy was done by Dr. Rubina Vohara on 25.11.2020. Patient stood procedure well. Patient was kept under observation for 1 day and is now being discharged in stable condition.

DISCHARGE CONDITION DETAILS
 Stable.

Neuberg Supratech

LABORATORY REPORT

Specimen: Blood
 Request: Hematology Report

Clinical Details
 Hypertrophic cardiomyopathy under treatment metoprolol, Nifedipine, ACE - inhibitor, CVD - regular follow up since 4-7 days, ANA - negative, M4 for antibody PCR - 1-2

Macroscopic Examination
 1) Received four pinkish cylindrical soft fragments of tissue measuring from 0.5 cm upto 0.6 cm embedded.

Microscopic Examination
 The renal biopsy includes 12 glomeruli, of which 07 are globally sclerosed. Two glomeruli are partially sclerosed. The remaining glomeruli show normal histomorphological features, normal sized mesangium and capillary lumina. Some few podocytes are seen. There is no evidence of crescentic glomerulonephritis and no evidence of tubulointerstitial nephritis. There is no evidence of pyelonephritis and fatty infiltration are present.

Immunofluorescence study (IF)
 IgG Negative (ANI Positive, segmental), IgA Negative, IgM Negative, C3 Negative, C1q Negative, Fibrinogen Negative, Negative Lambda, Negative.

Interpretation/Diagnosis
 Focal segmental and global glomerulosclerosis.
 Electron Microscopy suggested for further confirmation.

Lupus nephritis is a type of kidney disease caused by systemic lupus erythematosus link (SLE or lupus). Lupus is an autoimmune disease link—a disorder in which the body's immune system attacks the body's own cells and organs. Kidney disease caused by lupus may get worse over time and lead to kidney failure.

A/G Ratio			
TRIGLYCERIDES Sample Type: Serum GPO Phosphotungstic Acid Method	132	MG/DL	60-150

before treatment

GFR is an equation that uses your creatinine, age, race and gender to see how well your kidneys are working. Creatinine is the level of muscle waste in your blood stream. Kidneys are supposed to filter out this waste into urine.

EXAMINATION OF BLOOD

Test	Value	Unit	Reference Range
SERUM CREATININE Jaffe,s Method	5.92	mg/dl	Male 0.7 - 1.4 mg/dl Female 0.6 - 1.2 mg/dl
Haemoglobin	2	gm%	Male-13-17 gm% Female-12-15 gm%

This reagent is intended for quantitative determination of creatinine concentration in human serum or plasma.

Creatinine is a waste product formed from creatine phosphate, a high energy storage compound. It is removed from plasma by glomerular filtration and then excreted in urine. Creatinine is a useful indicator of renal function. Elevated levels of creatinine are associated with abnormal renal function as it relates to glomerular filtration.

Serum creatinine are used in combination with Urea/BUN to differentiate between pre-renal and renal causes of azotemia.

OM DIAGNOSTIC CENTRE
 3D-4D Sonography, Colour Doppler & Digital X-Ray Clinic.

Patient Name : C.B. JHURANI
 Referred By : DR. DEEPAK BALANISIR, MS Date : 15/10/2018

ULTRASOUND OF ABDOMEN

NO E/O FREE FLUID IN PERITONEAL CAVITY.

LIVER is normal in size and homogenous in echopattern. No focal mass lesion, Intra hepatic biliary radicals are not dilated. CBD & PV NORMAL.

GALL BLADDER is well distend and appears normal. NO E/O CALCULUS. Its wall thickness is within normal limit. No pericholecystic fluid collection.

SPLEEN & PANCREAS
 Normal in size and echopattern. No focal mass lesion or peri pancreatic fluid collection.

BOTH KIDNEYS
 Both kidneys are normal in size and echopattern.
RIGHT KIDNEY shows two calculi of size 4-5mm in mid calyx without hydronephrosis.
LEFT KIDNEY shows 4-3mm size calculus in lower calyx with mild hydronephrosis. Left vesicoureteric junction shows a Calculus of size 4.7mm. Left kidney shows two simple cortical cyst of size 22mm x 20mm & 12mm x 10mm. Corticomedullary differentiations are preserved on the both sides.

URINARY BLADDER is Well distended appear normal. No e/o stone or focal mass lesion within it's lumen. It's wall thickness is within normal limit.

PROSTATE is normal in size and echopattern.

IMPRESSION : Left VUJ calculus (4.7mm) with mild HN. Bilateral renal calculi.

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

Longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

5 Stages Of Kidney Disease

Stage 1	Stage 2	Stage 3	Stage 4	Stage 5
GFR ≥ 90	89 ≤ GFR < 60	59 ≤ GFR < 45	44 ≤ GFR < 30	29 ≤ GFR < 15
Normal or high function	Mildly decreased function	Mild to moderately decreased function	Severely decreased function	Kidney failure

RENAL FUNCTION TEST

Test Name	Observed Values	Unit	Bio Ref. Interval
RENAL FUNCTION TEST			
Blood Urea	239.49	mg/dL	12.6-42.6
Methodology: GLDH-Ureaase			
BUN, Blood Urea Nitrogen	112	mg/dL	11 - 23
Method: Calculated			
S. Creatinine	8.0	mg/dL	0.6-1.4
Methodology: Jaffe's kinetic			
S. UREA/UREA	139.6	mmol/L	135-145
Methodology: Indirect ISE			
S. Potassium	4.21	mmol/L	3.5-5.5
Methodology: Indirect ISE			
S. Chloride	108.5	mmol/L	98-110
Methodology: Indirect ISE			

Interpretation:
Renal function tests (RFT) are performed for evaluation of kidney function. The blood urea nitrogen or BUN test is primarily used, along with the creatinine test, to evaluate kidney function in a wide range of circumstances, to help diagnose kidney disease, and to monitor people with acute or chronic kidney dysfunction or failure. 1. Blood Urea Nitrogen (BUN) - Urea is a waste product formed in the liver when protein is metabolized. Urea is absorbed by the liver into the blood and is carried to the kidneys, where it is filtered out of the blood and released into the urine. 2. Creatinine - Creatinine is a waste product produced by muscles from the breakdown of a compound called creatine. Almost all creatinine is filtered from the blood by the kidneys and released into the urine. So blood levels are usually a good indicator of how well the kidneys are working. 3. Urea acid: The urea acid blood test is used to detect high levels of this compound in the blood in order to help diagnose recurrent kidney stones and gout. The test is also used to monitor urea acid levels in people undergoing chemotherapy or radiation treatment for cancer.

Tissue submitted for IF studies show 13 glomeruli of which 11 are sclerosed with significant deposits of IgA.

Diagnosis/Comments:

- Kidney (needle) biopsy shows significant global glomerular obsolescence (21/22) and moderate tubulointerstitial changes of chronicity, deposits of IgA consistent with chronic IgA nephropathy.
- In addition significant vessel changes of hypertension are seen.

CHRONIC KIDNEY DISEASE

Chronic kidney disease

Also called: CKD

Longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

कैंसर, किडनी, कोमा, सर्जरी एवं ऑटोइम्यून जैसे जटिल, साइलाज, असाध्य एवं असंभव रोगों का स्याई इलाज अब संभव है.....

BIOCHEMISTRY
GOOD HEALTH GOLD PACKAGE

Test Name	Result	Unit	Bio. Ref. Interval	Method
Kidney Function Test.				
Blood Urea Nitrogen	52	mg/dL	9.0-23	Urease with GLDH
Urea	111.28	mg/dL	19.26-49.22	Calculated
Creatinine	12.78	mg/dL	0.7-1.3	Alkaline picrate-kinetic
Uric Acid	11.2	mg/dL	3.7-9.2	Uricase/Peroxidase
Sodium	138	mEq/L	136-145	Indirect ISE
Potassium	5.44	mEq/L	3.5-5.1	Indirect ISE
Chloride	106.0	mEq/L	98-107	Indirect ISE
BUN/Creatinine Ratio	4.1	Ratio	12.1 - 20.1	Calculated

Result Rechecked and Kindly Correlate Clinically.

Before Treatment

Comment:
 BUN is directly related to protein intake and nitrogen metabolism and inversely related to the rate of excretion of urea. Blood urea nitrogen (BUN) levels reflect the balance between the production and excretion of urea. Increased levels are seen in renal failure (acute or chronic), urinary tract obstruction, dehydration, shock, burns, CHF, GI bleeding, nephrotoxic drugs. Decreased levels are seen in hepatic failure, nephrotic syndrome, cachexia (low-protein and high-carbohydrate diets). Urea is a non-proteinous nitrogen compound formed in the liver from ammonia as an end product of protein metabolism. Urea diffuses freely into extracellular and intracellular fluid and is ultimately excreted by the kidneys. Increased levels are found in acute renal failure, chronic glomerulonephritis, congestive heart failure, decreased renal perfusion, diabetes, excessive protein ingestion, gastrointestinal (GI) bleeding, hyperalbuminemia, hypovolemia, ketoacidosis, muscle wasting from starvation, neoplasms, pyelonephritis, shock, urinary tract obstruction, nephrotoxic drugs. Decreased levels are seen in inadequate diet protein, low-protein/high-carbohydrate diet, malabsorption syndromes, pregnancy, severe liver disease, certain drugs. Creatinine is catabolic product of creatinine phosphate, which is excreted by filtration through the glomerulus and by tubular secretion. Creatinine clearance is an acceptable clinical measure of glomerular filtration rate (GFR). Increased levels are seen in acute/chronic renal failure, urinary tract obstruction, hypothyroidism, nephrotoxic drugs, shock, dehydration, congestive heart failure, diabetes. Decreased levels are found in muscular dystrophy. BUN/Creatinine ratio (normally 12:1-20:1) is decreased in acute tubular necrosis, advanced liver disease, low protein intake and following hemodialysis. BUN/Creatinine ratio is increased in dehydration, GI bleeding, and increased catabolism. Uric acid levels show diurnal variation. The level is usually higher in the morning and lower in the evening. Increased levels are seen in starvation, strenuous exercise, malnutrition, or lead poisoning, gout, renal disorders, increased breakdown of body cell in some cancers (including leukemia, lymphoma, and multiple myeloma) or cancer treatments, hemolytic anemia, sickle cell anemia, or heart failure, pre-eclampsia, liver disease (cirrhosis), obesity, paroxysm, hypothyroidism, low blood levels of parathyroid hormone (PTH), certain drugs, foods that are very high in purines - such as organ meats, red meats, some seafood and beer. Decreased levels are seen in liver disease, Wilson's disease, Syndrome of inappropriate antidiuretic hormone (SIADH) certain drugs.

Test Report

Test Name	Results	Units	Bio. Ref. Interval
KIDNEY PANEL: KFT,SERUM			
Creatinine (Modified Jaffe-Kinetic)	16.78	mg/dL	0.70 - 1.30
GFR Estimated (CKD EPI Equation 2021)	6	mL/min/1.73m ²	>59
GFR Category (KDIGO Guideline 2012)	G5		
Urea	101.20	mg/dL	13.00 - 43.00
Urea Nitrogen: Blood (Calculated)	47.26	mg/dL	6.00 - 20.00
BUN/Creatinine Ratio (Calculated)	4		
Uric Acid (Uricase)	6.20	mg/dL	3.50 - 7.20
Total Protein (Buret)	6.40	g/dL	5.70 - 8.20
Albumin (BCG)	3.89	g/dL	3.20 - 4.80
A : G Ratio (Calculated)	1.56		0.90 - 2.00
Globulin (Calculated)	2.51	g/dL	2.0 - 3.5
Calcium, Total (Arsenazo III)	>15.00	mg/dL	8.70 - 10.40
Phosphorus (Molybdate UV)	4.85	mg/dL	2.40 - 5.10
Sodium (Indirect ISE)	140.00	mEq/L	136.00 - 145.00
Potassium (Indirect ISE)	5.98	mEq/L	3.50 - 5.10
Chloride (Indirect ISE)	112.00	mEq/L	98.00 - 107.00

After Dr Arpit Chopra Jain Modern Homoeopathy

Advice
 1. CKD Risk Map (2014)
 2. Cystatin C, serum (SI U)

Note
 1. Estimated GFR (eGFR) is calculated using the Cockcroft-Gault equation and GFR Category

STAGES OF CHRONIC KIDNEY DISEASE

Chronic Kidney Disease And Its Stages

मॉडर्न होम्योपैथी से किडनी की गंभीर समस्याओं का समाधान संभव - डॉ. अर्पित चौधरी

किडनी हमारे शरीर का अत्यंत महत्वपूर्ण अंग है, जो हमारे शरीर के पूरे अंगुण को सफाई करके उन्हें फिल्टर करने की शक्त प्रदान करता है। अगर किडनी में खराब काम चलाने की शक्ति कम हो जाती है, तो किडनी का काम ठीक-ठाक नहीं चल पाता। इसके कारण किडनी में खराब काम चलाने की शक्ति कम हो जाती है। इसके कारण किडनी में खराब काम चलाने की शक्ति कम हो जाती है।

डॉ. अर्पित चौधरी के द्वारा किडनी संबंधित और संबंधित करने की सफाई कर दी जाती है। यह किडनी में खराब काम चलाने की शक्ति कम हो जाती है। इसके कारण किडनी में खराब काम चलाने की शक्ति कम हो जाती है।

Acute renal failure

Also called: ARF, acute kidney failure

Overview

Symptoms

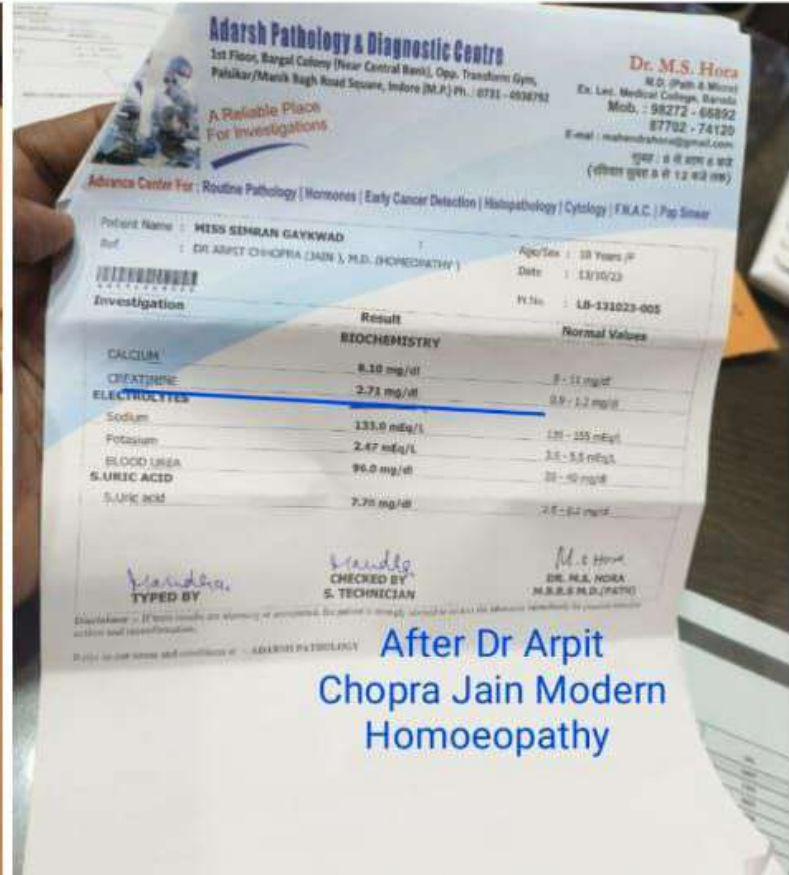

Treatments

A condition in which the kidneys suddenly can't filter waste from the blood.

What is Acute Renal Failure?

A sudden and significant decline in the quantity of kidney function is referred to as acute renal failure (ARF), also known as acute kidney injury (AKI).

SRI RAMACHANDRA LABORATORY SERVICES
SRI RAMACHANDRA MEDICAL CENTRE
INVESTIGATION REPORT

Patient Name & Address: **MRS. KANISH FATIMA**
KOTWAL, INDORE NEW SATELLITE
KOTWAL TOWN - 491008, INDORE

Referring Doctor: **DR. MANJUNATHAN S (MD) MBBS, MD, DM, MCh, FRCR**

Department: **NEPHROLOGY**

Test: **ANTINUCLEAR ANTIBODIES (ANA) BY IFA**

Result: **POSITIVE FOR ANTINUCLEAR ANTIBODIES**

PATTERN:
NUCLEUS HOMOGENEOUS PATTERN (CONDENSED CHROMOSOMES)
INTENSITY OF FLOUORESCENCE: 3+
END DILUTION: 1:250
ASSOCIATED ANTIBODIES:
Double stranded DNA, Single stranded DNA, Nucleosome, Histone (H1, H2A, H2B, H2E, H3, H4, H2A-H2B complex) and RNA (nucleolar RNA)

[RESULTS SHOULD BE CONFIRMED WITH IMMUNOBLOT ASSAY FOR SPECIFIC AUTO ANTIBODIES.]

CLINICAL UTILITY:
Prevalence of auto antibodies against:
1. dsDNA antigen is 92.5-96.0%
2. In DNA antigen is 82.5-96.0%
3. Histone antigen in Medication induced LE - 20% to 30%
4. Nucleosome antigen is 25.0-40.0%

REMARKS:
ANA by indirect immunofluorescence testing is an initial screening procedure for diagnosis of autoimmune disease. Positive results should always be confirmed with immunoblot assay. False positive results are common in elderly patients. False negative results are common in patients with low titer. False negative results are common in patients with low titer. False negative results are common in patients with low titer.

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

A longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

Common

More than 1 million cases per year (India)

- Treatment can help, but this condition can't be cured
- Requires a medical diagnosis
- Lab tests or imaging always required
- Chronic: can last for years or be lifelong

After Dr Arpit Chopra Jain Modern Homoeopathy

IgA nephropathy (nuh-FROP-uh-thee), also known as Berger disease, is a kidney disease. It happens when a germ-fighting protein called immunoglobulin A (IgA) builds up in the kidneys. This causes a type of swelling called inflammation that, over time, can make it harder for the kidneys to

Symptoms of Chronic Kidney Disease

- Dry and itchy skin.
- Tiredness or weakness.
- Bubbly or foamy pee.
- Swelling of hands, feet, ankles.
- Puffy eyes.
- Trouble sleeping.
- Loss of appetite.
- Muscle cramps.
- Need to pee more often.

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

A longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

Common

More than 1 million cases per year (India)

- Treatment can help, but this condition can't be cured
- Requires a medical diagnosis
- Lab tests or imaging always required
- Chronic: can last for years or be lifelong

KIDNEY RELATED किडनी संबंधित PROBLEMS CKD, KIDNEY FAILURE,...

कैसर, किडनी फैलियर, अस्पताल में गंभीर रूप से भर्ती मरिजों का उपचार, कोमा, शल्य चिकित्सा योग्य रोग, ऑटो इम्यून रोग, जीवनर रखाई लेने वाले रोगों की रोकथाम एवं 300 प्रकार के असाध्य जटिल रोगों की चिकित्सा।

RENAL FUNCTION TEST

Test Name	Observed Values	Unit	Ref. Interval
RENAL FUNCTION TEST			
Blood Urea	191.4	mg/dL	12.0-42.0
Methodology: Colorimetric			
BUN, Blood Urea Nitrogen	89	mg/dL	05 - 23
Method: Colorimetric			
S. Creatinine	21.7	mg/dL	0.6-1.4
Methodology: Jaffe's kinetic			
S. Sodium	123.0	mmol/L	135-145
Methodology: Ionselective			
S. Potassium	6.2	mmol/L	3.5-5.0
Methodology: Ionselective			
S. Chloride	92.8	mmol/L	98-110
Methodology: Ionselective			

Interpretation: Renal function tests (RFT) are performed by evaluation of kidney function. The blood urea nitrogen (BUN) test is primarily used, along with the creatinine test, to evaluate kidney function in a wide range of circumstances, to help diagnose kidney disease, and to monitor people with acute or chronic kidney dysfunction or failure. 1. Blood Urea Nitrogen (BUN) - Urea is a waste product formed in the liver when protein is metabolized. Urea is released by the liver into the blood and is carried to the kidneys, where it is filtered out of the blood and released into the urine. 2. Creatinine - Creatinine is a waste product produced by muscles from the breakdown of a compound called creatine. Almost all creatinine is filtered from the blood by the kidneys and released into the urine. As blood levels are usually a good indicator of how well the kidneys are working, it is used. The urea and creatinine test is used to detect high levels of this compound in the blood in order to help diagnose renal impairment, kidney stones and gout. This test is also used to monitor urea acid levels in people undergoing chemotherapy or radiation treatment for cancer.

Remark: Values rechecked. Advised clinical consultation.

Thickening of the bladder wall, also known as bladder wall thickening (BWT), can be a sign of various underlying conditions and is often detected through medical imaging like ultrasound, CT scans, or MRI. It can be a symptom of inflammation (cystitis), bladder stones, tumors, or obstructions to urine flow. If you're

Patient Name: MASTER, SATYAM SINGH
Referral By: DR. PUNJAB KUMAR
Date: 25/03/2025

U/S KUB - TRANS ABG
Clinical details: follow up case of urethritis

Bilateral kidneys are normal in size, shape, position and echotexture. Corticomedullary differentiation is preserved. No evidence of calculus in KCJ.
Minimal dilatation of bilateral PCJ's completely resolved on previous.
Rt. Kidney: 8.08 x 3.71 cm. Lt. Kidney: 8.21 x 3.57 cm

Urinary bladder is well distended. Lumen appears anechoic. Wall thickness is normal. Bladder wall appears slightly thickened.
Pre-void residual = 400 ml.
Post-void residual is 55 ml / residual even after mict.

Prostate appears normal.

Suggest: Clinical and lab test correlation.

Before treatment

www.sampoonimaging.com

PATIENT NAME: MASTER, SATYAM SINGH
REF. BY: DR. ARPIT CHOPRA
DATE: 26/03/2025
AGE/SEX: 45/MALE

WHOLE ABDOMEN SONOGRAPHY

Hepatic contour is smooth & span (12.1 cm) is normal. Parenchymal echotexture is normal. No focal lesion is seen. Intrahepatic biliary radicles are unobstructed.

Gall bladder is normally distended. Walls are thin. No shadow or calculus is seen. CBD & Portal vein are normal in caliber.

Vascularized part of Pancreas is normal in shape & size. Parenchymal echoes are normal. Peritoneal fluid is unaltered.

Spleen is normal 7.0 cm. No focal lesion seen.

Both kidneys are normal in position & size. Renal contour is smooth. Corticomedullary differentiation is normal. Minimal hydronephrosis noted in bilateral kidney may be due to back pressure changes.

Right kidney is 8.2 x 4.0 cm and left kidney is 8.5 x 4.5 cm in size.

Urinary bladder shows normal walls & size free lumen.

Pre-void urine = 164 ml (approx), post-void residual urine = 80 ml (approx).

No significant retroperitoneal lymphadenopathy seen.

No free fluid seen in peritoneal cavity. The dependent peritoneal recess are normal.

IMPRESSION:-

- Minimal hydronephrosis noted in bilateral kidney may be due to back pressure changes.
- Significant post void residual volume.

Advice:- Clinical correlation / Further evaluation with BUV / WCU & urine routine.

Kidney failure

Also called: renal failure

A condition in which the kidneys lose the ability to remove waste and balance fluids.

MOST COMMON TYPES

Chronic kidney disease

Longstanding disease of the kidneys leads to renal failure.

Acute renal failure

A condition in which the kidneys suddenly can't filter waste from the blood.

Name	: Mr. NEERAJ DUDANI	Collected	: 19-Jan-2021 09:51 AM
Lab No.	: 205293612	Age	: 45 Years
Gender	: Male	Received	: 19-Jan-2021 09:51 AM
Aic Status	: P	Reported	: 19-Jan-2021 03:02 PM
Ref By	: SELF	Report Status	: Final

Test Name	Results	Units	Bio. Ref. Interval
HbA1c (GLYCOSYLATED HEMOGLOBIN), BLOOD			
HbA1c	5.6	%	4.6 - 5.5
Estimated average glucose (EAG)	142.72	mg/dL	90 - 150

Interpretation
HbA1c result is suggestive of diabetic / well controlled Diabetes in a known Diabetic.
Note: Presence of Hemoglobin variants and/or conditions that affect red cell turnover must be considered, particularly when the HbA1C result does not correlate with the patient's blood glucose levels.

FACTORS THAT INTERFERE WITH HbA1C MEASUREMENT	FACTORS THAT AFFECT INTERPRETATION OF HbA1C RESULTS
Hemoglobin variants, elevated fetal hemoglobin (HbF) and chemically modified derivatives of hemoglobin (e.g. carbonylated Hb in patients with renal failure) can affect the accuracy of HbA1c measurements	Any condition that shortens erythrocyte survival or decreases mean erythrocyte age (e.g., recovery from acute blood loss, hemolytic anemia, HBSS, HBCC, and HBSC) will falsely lower HbA1c test results regardless of the assay method used. Iron deficiency anemia is associated with higher HbA1c

Nephrotic syndrome

- Overview
- Symptoms
- Treatments

A kidney disorder that causes the body to excrete too much protein in the urine.

Nephrotic syndrome is often caused by damage to small blood vessels in the kidneys that filter waste and excess water from the blood. An underlying health condition usually plays a role.

Rare

Fewer than 1 million cases per year (India)

Kidney stone
 Also called: nephrolithiasis

OVERVIEW SYMPTOMS TREATMENTS

Stone passes through ureter and bladder

Often painful when passed

A small, hard deposit that forms in the kidneys and is often painful when passed.

Kidney stones are hard deposits of minerals and acid salts that stick together in concentrated urine. They can be painful when passing through the urinary tract, but usually don't cause permanent damage.

Patient Details: Mrs. SHARDA JAIN (Female) 58yrs 22days
 EXID: M7100078501 Patient Location: SINGLEYVHDL AG
 Patient Number: 689109128
 ICMN: 20060541 Checked on: 06-JUN-2019 11:12
 Ref Doctor: DR. ARJUN CHANDRAN

EXAMINATION: URINE ABROMES

Urine is normal in color and clarity. No turbidity or sediment. Negative for any other and negative.
 The sediment is normal. No crystals are present in sediment.
 pH is 5.0. Specific Gravity is 1.020. No hematuria or pyuria.
 No bacteria are present in sediment. No leukocytes are present in sediment.
 No casts are present in sediment.
 No crystals are present in sediment.
 No other abnormalities are present in sediment.

Chronic kidney disease

Also called: CKD

Overview

Symptoms

Treatments

Longstanding disease of the kidneys leading to renal failure.

The kidneys filter waste and excess fluid from the blood. As kidneys fail, waste builds up.

5 Stages Of Kidney Disease

Stage 1	Stage 2	Stage 3	Stage 4	Stage 5
GFR ≥ 90	89 ≥ GFR ≥ 60	59 ≥ GFR ≥ 45	44 ≥ GFR ≥ 30	29 ≥ GFR ≥ 15
Normal or high function	Mildly decreased function	Mild to moderately decreased function	Severely decreased function	Kidney failure

Chronic kidney disease

Also called: CKD

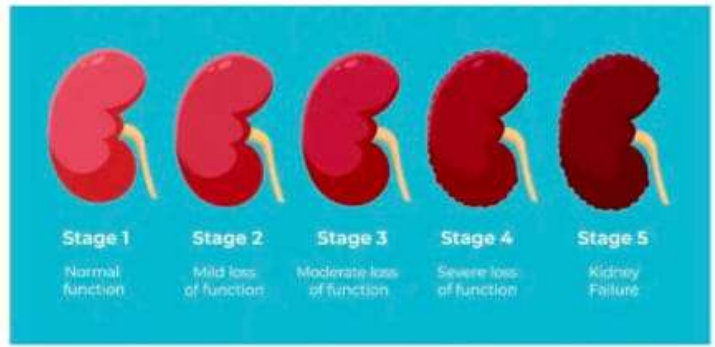

Overview

Symptoms

Treatments

Special

A longstanding disease of the kidneys leading to renal failure.

Service Project Infrastructure: Making Medical Care Accessible to All

"Medical facilities should be accessible to the common man in every way." Dr. Arpit Chopra Jain

To make his groundbreaking medical invention available to the general public, Professor Dr. Arpit Chopra Jain has established the Aarogya Super Speciality - Modern Homoeopathy Clinic, equipped with state-of-the-art facilities, at Janjirwala intersection in the heart of Indore city. At this clinic, patients have access to comprehensive consultation, diagnosis, and treatment for various diseases, all under one roof.

In addition, a dedicated consultation room for online patients has been set up to offer virtual consultations. Medicines are delivered through courier services, ensuring that even the most serious conditions can be treated from the comfort of one's home. Dr. Arpit Chopra Jain's initiative ensures that high-quality healthcare is not just limited to in-person visits but is also accessible to those in distant locations.

Dr. Arpit Chopra Jain: A Commitment to Service and Responsibility

Dr. Arpit Chopra Jain, raised in a family of doctors, embodies the true essence of a dedicated medical professional. With a deep sense of responsibility toward human welfare, he has revolutionized healthcare through his groundbreaking invention of Super Speciality Modern Homoeopathy treatment. His work has provided a new direction in treating complex diseases, ensuring that even those who once felt hopeless have found relief.

campaign to combat sickle cell anemia, Dr. Arpit Chopra Jain is also working tirelessly in tribal areas. His efforts contribute significantly to the permanent and successful treatment of this genetic disorder, further reflecting his unwavering commitment to the welfare of humanity.

Dr. Arpit Chopra Jain also organizes medical camps aimed at diagnosing complex diseases, providing free consultations to those in need. His sense of duty was especially evident during the devastating COVID-19 pandemic, where he took extraordinary measures to help his community. Understanding the gravity of the situation, he distributed free Corona prevention medicines to approximately 2,25,000 people, including Corona Warriors, potentially saving many lives.

Dr. Arpit Chopra Jain exemplifies what it means to be a physician who balances medical practice with social responsibility, continuing to make a profound impact on both individual lives and society as a whole.

Recognizing the significance of his role, Dr. Arpit Chopra Jain extends his responsibilities beyond medical practice. He considers it his moral and national duty to contribute to various social service activities. Along with treating complicated medical conditions, Dr. Arpit Chopra Jain is committed to shaping the future of homoeopathy. He actively mentors and educates new students entering the field, helping them gain the knowledge necessary to advance in medical science.

Samman Awards: A Tribute to Responsibility and Service

"Respect received from society increases responsibility." Dr. Arpit Chopra Jain

Dr. Arpit Chopra Jain believes that when one contributes responsibly and at the right time, society offers its respect. However, with that respect comes an even greater sense of responsibility.

Dr. Arpit Chopra Jain, through his groundbreaking invention of the Arogya Super Speciality Modern Homoeopathy medical system and his numerous social contributions, has garnered widespread recognition. His dedication to improving the health and well-being of others has not gone unnoticed. He has been honored by many prominent ministers, intellectuals, and senior artists across various dignified platforms. These awards have been bestowed upon him by social, national, and international institutions, further acknowledging his remarkable contributions to the field of medicine and humanity.

This recognition only fuels Dr. Arpit Chopra Jain's determination to continue serving society with even greater dedication and responsibility.

A Legacy of Healing: 3000+ Patients Touched by Dr. Arpit Chopra Jain

From chronic conditions to life-threatening diseases, Dr. Arpit Chopra Jain's innovative approach in homoeopathy has brought hope to thousands. This wall honors each patients journey to health and the compassionate dedication of Dr. Jain, who believes that every illness has a cure. Together, they form a legacy of resilience and recovery.

From Despair to Recovery: Celebrating 3000+ Success Stories

Behind every photo is a story of resilience and recovery made possible through Dr. Arpit Chopra Jain's pioneering work in modern homoeopathy. This wall is a celebration of his innovative treatment approach at Aarogya Super Speciality, which has empowered thousands to reclaim their health and live fuller lives.

Thank
You!

Possible solutions to complex, incurable and impossible diseases. Harmless, quick, economical and permanent treatment system, Homoeopathy of the future, Thank you for giving your valuable time to Super Speciality Modern Homoeopathy treatment system.

May you always live a happy life by staying physically,
mentally and socially healthy and fulfill the WHO standards

This is my wish, This is my effort...
